

Franklin Universal Trust (FT)

High Yield | Factsheet as of September 30, 2025

Investment Overview

The fund seeks to provide high current income consistent with preservation of capital. Its secondary objective is growth of income through dividend increases and capital appreciation.

Performance shown represents past performance and is no guarantee of future results. Current performance may be higher or lower than the performance shown. Investment return and principal value will fluctuate so shares, when sold, may be worth more or less than the original cost. Returns based on Market Price or NAV, and assume the reinvestment of all distributions at the Dividend Reinvestment Plan Price or NAV, respectively. All returns include the deduction of management fees, operating expenses and all other fund expenses, and do not reflect the deduction of brokerage commissions or taxes that investors may pay on distributions or the sale of shares. When applicable, performance would have been lower if fees had not been waived in various periods. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expense or sales charges. Returns for periods of less than one year are not annualized. Please visit franklintempleton.com for the most recent month-end performance.

Gross expenses are the fund's total annual operating expenses as of the fund's annual report available at the time of publication. Actual expenses may be higher and may impact portfolio returns. Net expenses reflect voluntary fee waivers, expense caps and/or reimbursements. Voluntary waivers may be modified or discontinued at any time without notice. NAV is total assets less total liabilities divided by the number of shares outstanding. Market Price, determined by supply and demand, is the price an investor purchases or sells the fund. The Market Price may differ from a fund's NAV. Premium / Discount reflects the difference between the NAV and the Market Price of the fund, and represents the amount that the fund is trading above or below its NAV, expressed as a percentage of the NAV. Distribution Rate is calculated by annualizing the most recent distribution amount paid, divided by the closing market price or NAV as of the date indicated. The Distribution Rate calculation includes income and return of capital, and excludes special distributions. The Distribution Rate is not guaranteed, subject to change, and is not a quotation of fund performance. The fund employs leverage through the issuance of senior fixed rate notes which creates an opportunity for increased income, but, at the same time, creates special risks (including the likelihood of greater volatility of net asset value and market price of common shares). The cost of leverage rises and falls with changes in short-term interest rates. Such increases/decreases in the cost of the fund's leverage may be offset by increased/decreased income from the fund's floating rate instruments.

Growth of \$10,000

Inception through September 30, 2025
Market Price Returns, assuming dividends reinvested

The Growth of \$10,000 chart reflects a hypothetical \$10,000 investment on Market Price and assumes reinvestment of dividends and capital gains. Fund expense, including management fees and other expenses were deducted.

Portfolio Data Information

Credit Quality is a measure of a bond issuer's ability to repay interest and principal in a timely manner. The credit ratings shown are based on each portfolio security's rating as provided by Standard and Poor's, Moody's Investors Service and/or Fitch Ratings, Ltd. and typically range from AAA (highest) to D (lowest), or an equivalent and/or similar rating. For this purpose, the manager assigns each security the middle rating from these three agencies. When only two agencies provide ratings, the lower of the two ratings will be assigned. When only one agency assigns a rating, that rating will be used. Foreign government bonds without a specific rating are assigned a country rating, if available. Securities that are unrated by all three agencies are reflected as such. The credit quality of the investments in the Fund's portfolio does not apply to the stability or safety of the Fund. These ratings are updated monthly and may change over time. Please note, the Fund itself has not been rated by an independent rating agency.

What should I know before investing?

All investments involve risks, including possible loss of principal. Fixed income securities involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls.

Low-rated, high-yield bonds are subject to greater price volatility, illiquidity and possibility of default. Equity securities are subject to price fluctuation and possible loss of principal. To the extent the portfolio invests in a concentration of certain securities, regions or industries, it is subject to increased volatility. Dividends may fluctuate and are not guaranteed, and a company may reduce or eliminate its dividend at any time. The manager may consider environmental, social and governance (ESG) criteria in the research or investment process; however, ESG considerations may not be a determinative factor in security selection. In addition, the manager may not assess every investment for ESG criteria, and not every ESG factor may be identified or evaluated.

Glossary

Beta: A measure of the fund's volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market. R-squared measures the strength of the linear relationship between the fund and its benchmark. R-squared at 1 implies perfect linear relationship and zero implies no relationship exists. Sharpe Ratio refers to a risk-adjusted measure calculated using standard deviation and excess returns to determine reward per unit of risk. The higher the ratio, the greater the risk-adjusted performance.

Standard Deviation: Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return. Weighted Average Maturity:

An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings. Effective Duration is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes. Leverage: Leveraged Assets as a percentage of Total Net Assets.

Important Information

Effective January 1, 2024, the fund changed its benchmark to the ICE BofA US High Yield Constrained Index. Distributions are not guaranteed and are subject to change.

The Closed-End Funds are not sold or distributed by Franklin Distributors, LLC, or any affiliate of Franklin Resources, Inc. Unlike open-end funds, shares are not continually offered. Like other public companies, closed-end funds have a one-time initial public offering, and once their shares are first issued, are generally bought and sold through non-affiliated broker/dealers and trade on nationally recognized stock exchanges. Share prices will fluctuate with market conditions and, at the time of sale, may be worth more or less than your original investment. Shares of exchange-traded closed-end funds may trade at a discount or premium to their original offering price, and often trade at a discount to their net asset value. Investment return, market price and net asset value will fluctuate with changes in market conditions. The Funds are subject to investment risks, including the possible loss of principal invested.
