What Are the Risks?

All investments involve risks, including possible loss of principal. The fund's ability to invest in smaller-company securities that may have limited liquidity involves additional risks, such as relatively small revenues, limited product lines and small market share. Historically, these stocks have exhibited greater price volatility than larger-company stocks, especially over the short term. In addition, the fund may invest up to 25% of its total assets in foreign securities, which involve special risks, including currency fluctuations and economic and political uncertainty. Value securities may not increase in price as anticipated or may decline further in value. These and other risks are detailed in the fund's prospectus.

Glossary

Beta: A measure of the fund's volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market.

Standard Deviation: A measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return.
