Performance data quoted represents past performance, which does not guarantee future results. Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. Returns with sales charge reflect a deduction of the stated maximum sales charge. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges. Returns for periods of less than one year are not annualized. All classes of shares may not be available to all investors or through all distribution channels. For current month-end performance, please visit franklintempleton.com.

The fund began offering Class Y shares on 9/23/2002, the fund began offering Class C shares on 2/1/1999, and the fund began offering Class R6 shares on 7/2/2012. Performance quotations have been calculated as follows: (a) Class Y periods prior to 9/23/2002 are based on the fund's Class A performance, which has not been adjusted for the lower operating expenses; had it been adjusted, performance would be higher; for Class C periods prior to 2/1/1999, a restated figure is used based on the fund's Class A performance; for Class R6 periods prior to 7/2/2012 are based on the fund's Class Y performance, which has not been adjusted for the lower operating expenses; had it been adjusted, performance would be higher. The restated performance for Class C was adjusted to take into account differences in class-specific operating expenses and maximum sales charges. (b) For periods after the share class offering, performance for the specific share class is used, reflecting the expenses and maximum sales charges applicable to that class. Class C share performance reflects conversion to class A shares after eight years.

Share Class Details

	CUSIP	Ticker	Sales Charges (%)		Expenses (%)	
			Max	CDSC	Gross	Net
Class Y	746772409	PEQYX	0.00	—	0.92	0.92
Class A	746772102	PEQUX	5.75	—	1.17	1.17
Class C	746772300	PUGCX	0.00	1.00	1.92	1.92
Class R6	746772805	PGLEX	0.00	—	0.80	0.80

Gross expenses are the fund's total annual operating expenses as of the fund's prospectus available at the time of publication. Net expenses are capped under a contractual agreement, which cannot be terminated prior to 02/28/2026 without Board consent. Actual expenses may be higher and may impact portfolio returns. There is a 1% CDSC on any Class C shares you sell within 12 months of purchase. The fund's monthly base fee is increased or reduced by a performance adjustment as described in the prospectus.

What should I know before investing?

All investments involve risks, including possible loss of principal. International investments are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets. The investment style may become out of favor, which may have a negative impact on performance. Small- and mid-cap stocks involve greater risks and volatility than large-cap stocks. The portfolio is non-diversified and may invest in a relatively small number of issuers, which may negatively impact the performance and result in greater fluctuation in value. To the extent the portfolio invests in a concentration of certain securities, regions or industries, it is subject to increased volatility. Derivative instruments can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. Active management does not ensure gains or protect against market declines. The manager may consider environmental, social and governance (ESG) criteria in the research or investment process; however, ESG considerations may not be a determinative factor in security selection. In addition, the manager may not assess every investment for ESG criteria, and not every ESG factor may be identified or evaluated. These and other risks are discussed in the fund's prospectus.

Glossary

Beta: A measure of the fund's volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market. R-squared measures the strength of the linear relationship between the fund and its benchmark. R-squared at 1 implies perfect linear relationship and zero implies no relationship exists. Sharpe Ratio refers to a risk-adjusted measure calculated using standard deviation and excess returns to determine reward per unit of risk. The higher the ratio, the greater the risk-adjusted performance. Standard Deviation: Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return. Alpha is the annualized percentage difference between a portfolio's actual returns and its expected performance given its level of market risk, as measured by beta. Information Ratio: In investing terminology, the ratio of expected return to risk. Usually, this statistical technique is used to measure a manager's performance against a benchmark. This measure explicitly relates the degree by which an investment has beaten the benchmark to the consistency by which the investment has beaten the benchmark. Tracking Error measure of the deviation of the return of a fund compared to the return of a benchmark over a fixed period of time. Expressed as a percentage. The more passively the investment fund is managed, the smaller the tracking error. Turnover is a measure of the fund's trading activity which represents the portion of the fund's holdings that has changed over a twelve-month period through the fiscal year end. There is no assurance that the fund will maintain its current level of turnover. Weighted Average Market Capitalization: A determination of a company's value, calculated by multiplying the total number of company stock shares outstanding by the price per share. For a portfolio, the value represents a weighted average based on the stocks held. Price to Book: The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. Price to Earnings (12-month Forward): A measure of the price to earnings ratio for a stock using the forecasted earnings for the next 12 months. For a portfolio, the value represents a weighted average of the stocks it holds.
