

Putnam Core Bond Fund

Class Y: PYTRX Class A: PTRNX

Commentary | as of June 30, 2025

Key Takeaways

- **Markets:** There were large swings in financial market sentiment across the second quarter of 2025. In April, US President Donald Trump announced significant increases in US tariff rates as part of his “Liberation Day” measures. Spreads across fixed income sectors widened as fears grew that tariffs could lead to a drop in growth and a new round of inflationary pressures, which could damage the US economy. Subsequently, a temporary pause (in many cases, 90 days) in increased levies helped calm some of the market nerves. The passage of the “One Big Beautiful Bill” spending package after quarter-end further helped reduce the uncertainties that had been a strong headwind to fixed income markets.
- **Contributors:** Investment-grade (IG), collateralized loan obligation (CLO) and high-yield exposures within corporate credit.
- **Detractors:** Underweight exposure to emerging market debt; long exposure to agency mortgage-backed securities (MBS).
- **Outlook:** We believe the macroeconomic outlook remains resilient despite ongoing policy uncertainty, supported by strong consumption, a tight labor market and reaffirmed low tax rates. While tariffs have introduced volatility, the overall balance of risks and steady growth suggest the US Federal Reserve is likely to limit itself to at most one more rate cut this year. With resilient growth and large fiscal deficits keeping pressure on yields, we continue to expect 10-year US Treasury yields to end the year in a 4.50%–5.00% range.

Performance Review

- For the second quarter of 2025, the fund slightly outperformed its benchmark, the Bloomberg US Aggregate Index.
- The primary contributors to performance over the period were IG, high-yield and CLO allocations within corporate credit. Both IG and high yield corporate credit spreads tightened over the period, ending June at 83 basis points and 290 basis points, respectively.
- An underweight exposure to emerging market debt and a modest long exposure to agency MBS were slightly detractive over the period. Within mortgage credit, exposures to both commercial mortgage-backed securities (CMBS) and non-agency residential mortgage-backed securities were modestly additive to relative performance.

Outlook

- **Corporate credit:** After trading in a narrow range during January, spread volatility moved considerably higher following President Trump’s tariff announcements. After IG spreads hit new year-to-date wides of +119 in April, spreads tightened to +84 to end June and then retested the year-to-date tights of +77 in early July. The technical strength of the IG corporate market has superseded policy and tariff uncertainty despite its potential to impact demand and cost structures across sectors. Prior to the tariff announcements, corporate balance sheets were generally in good shape, affording most IG issuers substantial flexibility to manage through shifting economic conditions, which has provided further support to the market. We expect domestic sectors like utilities, insurance and wireless to be more resilient, while consumer discretionary sectors and those with global supply chains are more at risk for disruption. With valuations now back toward the tight end of the range, the market appears to be pricing in a sanguine outcome with minimal room for policy errors, and therefore we continue to favor a balanced risk posture with a bias toward non-cyclical sectors.
- **Commercial mortgage credit:** The broad commercial real estate (CRE) market continues to face headwinds and increased risks, including elevated interest rates, rate volatility and tighter credit conditions. However, CRE is showing signs of improvement, and rising transaction volumes are providing more price transparency. Signs of optimism include payoff and refinancing rates that continue to surprise to the upside among all property types (including office) and the potential for higher economic growth and bank deregulation under the new administration. Commercial property prices have rebounded off the lows, but large dispersions persist between different property types and geographies. We expect loan modifications and extensions to be prevalent as sponsors and servicers pursue work-out solutions, and liquidations should pick up with property price discovery. The prevalence of modifications and extensions on existing debt have helped mitigate maturity wall issues and the immediate need for new financing. Furthermore, given the higher rate environment and attractive opportunities away from top-tier stabilized assets, private debt funds have raised capital specifically for CRE lending, which has helped fill the void left by regional banks. While we are neutral on CRE as a whole, we believe CMBS offers good opportunities for security selection when utilizing detailed loan level analysis, particularly when considering relative value to other fixed income sectors.
- **Residential mortgage credit:** US homeowner balance sheets remain well positioned, supported by locked in home price appreciation, lower household leverage, strong underwriting standards and a healthy labor market. A lack of inventory and steady household formation should keep the housing supply and demand mismatch supportive of home prices. We expect home prices to rise modestly over the next year, but regional variances are likely to persist. We maintain a neutral view of the sector overall given rich valuations and our modest expectations for home price growth but find value in certain subsectors. Given the flat credit curve, we favor opportunities near the top of the capital stack, such as recent issue non-qualified mortgage and credit risk transfer bonds.

Morningstar Rating™

Overall Rating as of June 30, 2025

★★★★★ (5-Star) Class Y

★★★★★ (5-Star) Class A

As of 06/30/2025 the fund’s Class A and Class Y shares received a 5 star overall Morningstar rating™, measuring risk-adjusted returns against 429, 377 and 282 Intermediate Core Bond funds over the 3-, 5- and 10- year periods, respectively. A fund’s overall rating is derived from a weighted average of the performance figures associated with its 3-, 5- and 10-year (if applicable) rating metrics.

Fund Characteristics

Fund

Benchmark 1=Bloomberg U.S. Aggregate Index
Benchmark 2=Putnam Core Bond Linked Benchmark

Performance data quoted represents past performance, which does not guarantee future results. Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. Returns with sales charge reflect a deduction of the stated maximum sales charge. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges. Returns for periods of less than one year are not annualized. All classes of shares may not be available to all investors or through all distribution channels. For current month-end performance, please visit franklintempleton.com. The total annual operating expenses are as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns.

What are the Risks?

All investments involve risks, including possible loss of principal. Fixed income securities involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls. Low-rated, high-yield bonds are subject to greater price volatility, illiquidity and possibility of default. Asset-backed, mortgage-backed or mortgage-related securities are subject to prepayment and extension risks. International investments are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets. Derivative instruments can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. Active management does not ensure gains or protect against market declines. The manager may consider environmental, social and governance (ESG) criteria in the research or investment process; however, ESG considerations may not be a determinative factor in security selection. In addition, the manager may not assess every investment for ESG criteria, and not every ESG factor may be identified or evaluated. These and other risks are discussed in the fund's prospectus.

Glossary

A basis point (bp, or bps) is one one-hundredth of one percent (1/100% or 0.01%).
A collateralized loan obligation (CLO) is a single security backed by a pool of debt.
Commercial mortgage-backed securities (CMBS) are a type of mortgage-backed security backed by commercial mortgages rather than residential real estate. CMBS tend to be more complex and volatile than residential mortgage-backed securities due to the unique nature of the underlying property assets.
A Credit Risk Transfer (CRT) is a channel for government-sponsored enterprises (GSEs) like Fannie Mae and Freddie Mac to transfer credit risk to private investors and away from taxpayers.
Residential mortgage-backed securities (RMBS) are a type of mortgage-backed debt obligation created from residential debt, such as mortgages, home-equity loans and subprime mortgages.

Important Information

Effective 2/28/23, the fund's name changed from Putnam Fixed Income Absolute Return Fund and was repositioned to a core bond strategy.

The information provided is not a complete analysis of every material fact regarding any country, market, industry, security or fund. Because market and economic conditions are subject to change, comments, opinions and analyses are rendered as of the date of this material and may change without notice. A portfolio manager's assessment of a particular security, investment or strategy is not intended as individual investment advice or a recommendation or solicitation to buy, sell or hold any security or to adopt any investment strategy; it is intended only to provide insight into the fund's portfolio selection process. Holdings are subject to change.

The Bloomberg US Aggregate Index is comprised of investment-grade, U.S. dollar-denominated government, corporate, and mortgage- and asset-backed issues having at least one year to maturity. Source: Bloomberg Indices. The Putnam Core Bond Linked Benchmark represents the performance of the ICE BofA U.S. Treasury Bill Index through February 27, 2023, and the performance of the Bloomberg U.S. Aggregate Bond Index thereafter.

Important data provider notices and terms available at www.franklintempletondatasources.com. All data is subject to change.

Effective Duration is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes. The 30-day SEC yield is calculated using the net income (interest and dividends) per share earned over a trailing 30-day period (annualized), divided by the fund's share price at the end of that period. It may not equal the fund's actual income distribution rate, which reflects the fund's past dividends paid to shareholders.

Credit Quality is a measure of a bond issuer's ability to repay interest and principal in a timely manner. The credit ratings shown are based on each portfolio security's rating as provided by Standard and Poor's, Moody's Investors Service and/or Fitch Ratings, Ltd. and typically range from AAA (highest) to D (lowest), or an equivalent and/or similar rating. For this purpose, if two or more of the agencies have assigned differing ratings to a security, the highest rating is used. Securities that are unrated by all three agencies are reflected as such. The credit quality of the investments in the fund's portfolio does not apply to the stability or safety of the fund. These ratings are updated monthly and may change over time. Please note, the Fund itself has not been rated by an independent rating agency.

Morningstar Rating™: Source: Morningstar®, 06/30/2025. For each mutual fund and ETF with at least a 3-year history, Morningstar calculates a Morningstar Rating™ based on how a fund ranks on a Morningstar Risk-Adjusted Return measure against other funds in the same category. This measure takes into account variations in a fund's monthly performance, and does not take into account the effects of sales charges and loads, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The weights are: 100% 3-year rating for 36-59 months of total returns, 60% 5-year rating/40% 3-year rating for 60-119 months of total returns, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent 3-year period actually has the greatest impact because it is included in all three rating periods. The fund's Class A shares received a Morningstar Rating of 5, 5 and 4 and fund's Class Y shares received a Morningstar Rating of 5, 5 and 5 star(s) for the 3-, 5- and 10-year periods, respectively. Franklin Templeton provides this fund's Morningstar Rating™ for Class A and Class Y shares only. Other share classes may have different Morningstar ratings.
