What Are the Risks?

The investment risk of the retirement target fund changes over time as its asset allocation changes. Since the fund invests in underlying funds, which may engage in a variety of investment strategies involving certain risks, the Franklin LifeSmart 2025 Retirement Target Fund is subject to those same risks. All investments involve risks, including possible loss of principal. Principal invested is not guaranteed at any time, including at or after the fund's retirement target date; nor is there any guarantee that the fund will provide sufficient income at or through the investor's retirement. Stock prices fluctuate, sometimes rapidly and dramatically, due to factors affecting individual companies, particular industries or sectors, or general market conditions. Bond prices generally move in the opposite direction of interest rates. Thus, as the prices of bonds in the fund adjust to a rise in interest rates, the fund's share price may decline. Foreign investing carries additional risks such as currency and market volatility and political or social instability, risks which are heightened in developing countries. These risks are described more fully in the fund's prospectus. Investors should consult their financial advisor for help selecting the appropriate fund of funds, or fund combination, based on an evaluation of their investment objectives, retirement time horizons and risk tolerance.

Glossary

Beta: A measure of the fund's volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market.

Standard Deviation: A measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return.
