

# Franklin Small Cap Enhanced ETF (FSML)

Small Cap | Factsheet as of March 31, 2026

## Investment Overview

The fund seeks long-term capital appreciation by investing in a portfolio of small cap equity securities selected from the fund's investible universe (as represented by the Russell 2000® Index). The fund pursues a multi-factor, quantitative investment approach that leverages the active convictions of the Specialist Investment Managers at Franklin Templeton including Putnam, Royce, Franklin and Clearbridge.

## Total Returns (%)

	Cumulative			Average Annual				Inception	Inception Date
	3-Mth	6-Mth	YTD	1-Yr	3-Yr	5-Yr	10-Yr		
Market Price Return	0.32	—	0.32	—	—	—	—	-1.02	12/9/2025

NAV Returns	—	—	—	—	—	—	—	—	—	—
Benchmark	—	—	—	—	—	—	—	—	—	—

**Performance data quoted represents past performance, which does not guarantee future results.** Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expense or sales charges. Returns for periods of less than one year are not annualized. For current month-end performance, please visit [franklintempleton.com](http://franklintempleton.com).

Net Asset Value (NAV) returns are based on the NAV of the ETF; Market Price returns are based upon the official closing price of the ETF's shares. Returns are average annualized total returns, except for those periods of less than one year, which are cumulative. Market Price returns are calculated using the closing price as of 4 p.m. Eastern time on each trading day (when NAV is normally determined for most funds), and do not represent the returns you would receive if you traded shares at other times. Performance for the ETF and its benchmark index are as of the ETF's last trading day before the end of the period. Since shares of the Fund did not trade in the secondary market until after the Fund's inception, for the period from inception to the first day of secondary trading December 11, 2025 the NAV of the Fund is used as a proxy for the Market Price to calculate market returns.

The total annual operating expenses are as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns.

**What should I know before investing?**

**All investments involve risks, including possible loss of principal. Small- and mid-cap stocks** involve greater risks and volatility than large-cap stocks. To the extent the portfolio invests in a **concentration of certain securities, regions or industries**, it is subject to increased volatility. There can be no assurance that the fund's **multi-factor stock selection** process will enhance performance. Exposure to such investment factors may detract from performance in some market environments, perhaps for extended periods. **Derivative instruments** can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. **International investments** are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in **emerging markets. The fund is newly organized**, with a limited history of operations. These and other risks are discussed in the fund's prospectus.

**Glossary**

**Weighted Average Market Capitalization:** A determination of a company's value, calculated by multiplying the total number of company stock shares outstanding by the price per share. For a portfolio, the value represents a weighted average based on the stocks held. **Price to Book:** The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Earnings (12-Month Trailing)** is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds.

**Important Information**

**ETFs and ETPs trade like stocks, fluctuate in market value and may trade at prices above or below the ETFs/ETPs net asset value. Brokerage commissions and ETF expenses will reduce returns.**

ETF/ETP shares may be bought or sold throughout the day at their market price, not their Net Asset Value (NAV), on the exchange on which they are listed. Shares of ETFs/ETPs are tradable on secondary markets and may trade either at a premium or a discount to their NAV on the secondary market.

**Canada:** This content is intended only for Canadian institutional investors that qualify as "permitted clients" as defined in National Instrument 31-103 - Registration Requirements, Exemptions and Ongoing Registrant Obligations. U.S. securities laws generally limit a non-U.S. fund's purchase of a U.S. registered mutual fund or ETF/ETP (a "U.S. Fund") to no more than 3% of the U.S. Fund's voting stock. You should consult your legal counsel prior to investing in a U.S. Fund.
