FRANKLIN TEMPLETON

Franklin Global Allocation Fund

Advisor Class: FFAAX Class A: FFALX | **Commentary | as of September 30, 2026**

Key Takeaways

- **Markets:** Global equities were mixed over the third quarter of 2026 as the powerful second-quarter rebound lost momentum. US large-cap equities advanced modestly, but rising oil prices, a renewed global bond selloff and higher policy rates became increasingly important headwinds later in the quarter. Global bond markets experienced one of their weakest quarters in many years. Longer-dated bonds bore the brunt of the selloff. The benchmark 10-year US Treasury (UST) yield rose to its highest level since 2002.
- **Contributors:** Cross-asset allocation drove relative results, led by a fixed income underweight, with additional support from an allocation to alternatives and an equity overweight. Security selection in equity and fixed income also added value.
- **Detractors:** Within equity, stock selection in Asia weighed on relative results, as did an overweight allocation to Europe. In fixed income, security selection in German Bunds modestly detracted.
- **Outlook:** Corporate earnings are still growing, albeit at a slower pace, and credit spreads remain tight. We remain overweight equities, although we carefully monitor earnings conditions for signs of deterioration.

Performance Review

- Over the quarter, the Franklin Global Allocation Fund (Advisor Class without sales charge) delivered a gain and performed better than its blended benchmark.
- Stock selection strengthened relative performance. Favorable security selection in North America, including an overweight in Apple and positions in energy names such as Valero Energy, more than offset selection in Asia, where semiconductor-related holdings including Samsung Electronics weighed on results. From a sector perspective, selection in industrials contributed most, while selection in information technology was the largest detractor.
- In fixed income, positive security selection in US Treasuries and, to a lesser extent, securitized and agency bonds more than offset modestly detractive selection in developed-market sovereign bonds such as German Bunds.
- The Fund holds four underlying funds in the alternatives investment space. Three of the four posted positive absolute returns, led by a systematic style premia ETF.

Outlook

- At the time of writing, we see heightened volatility in fixed income markets, as higher energy prices and resilient growth push up bond yields. This has pressured equity valuations and resulted in an increasingly positive correlation between stocks and bonds, while also highlighting the importance of additional diversifiers within investment portfolios.
- From our perspective, consistently strong economic growth and corporate earnings support a positive attitude toward equities, even in the face of uncertainties such as geopolitics, persistent inflation and monetary policy tightening.
- The energy shock caused by the US-Iran War has captured the attention of markets and policymakers. This event is dovetailing with other factors such as tariffs and AI capital expenditure to push up headline inflation. This is making it difficult to assess how that shock will be passed on in the cost of everyday items. We believe this "passthrough effect" will be limited and should not result in persistently higher core inflation readings.
- Corporate earnings have impressed since the start of 2026, driven largely by sustained levels of "hyperscaler" capital expenditures. Global earnings growth estimates for the 2026 calendar year exceed 35% and remain close to 20% for the next 12 months. However, earnings growth revisions have started to slow, notably in emerging markets, amid uncertainty about how the AI story will unfold. This deceleration has raised fears of an earnings peak.
- We prefer to see it as a natural progression in the earnings story, backed by revisions breadth, which has improved significantly during the last three months. Increasing adoption of AI among individuals and businesses has begun to divert the flow of capital away from semiconductors toward infrastructure and energy. In addition, businesses in diverse industries are beginning to see AI-related productivity improvements that translate to healthier profit margins and improved earnings.

Morningstar Rating™

Overall Rating as of September 30, 2026

★★★★ **(4-Star)** Advisor Class

★★★★ **(4-Star)** Class A

As of 09/30/2026 the fund's Class A and Advisor Class shares received a 4 star overall Morningstar rating™, measuring risk-adjusted returns against 401, 388 and 323 Global Moderate Allocation funds over the 3-, 5- and 10- year periods, respectively. A fund's overall rating is derived from a weighted average of the performance figures associated with its 3-, 5- and 10-year (if applicable) rating metrics. The number of funds in the category for the Overall Rating are listed under the 3-year period.

Performance data quoted represents past performance, which does not guarantee future results. *Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. Returns with sales charge reflect a deduction of the stated maximum sales charge. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges. Returns for periods of less than one year are not annualized. All classes of shares may not be available to all investors or through all distribution channels. For current month-end performance, please visit franklintempleton.com.*
Gross expenses are the fund's total annual operating expenses as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns. Net expenses reflect contractual fee waivers, expense caps and/or reimbursements, which cannot be terminated prior to 04/30/2027 without Board consent. Additional amounts may be voluntarily waived and/or reimbursed and may be modified or discontinued at any time without notice.

What are the Risks?

All investments involve risks, including possible loss of principal. **Equity securities** are subject to price fluctuation and possible loss of principal. **Fixed income securities** involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls. **Low-rated, high-yield bonds** are subject to greater price volatility, illiquidity and possibility of default. **The investment style** may become out of favor, which may have a negative impact on performance. **International investments** are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in **emerging markets**. **Trading models** used by the manager for securities selection may become outdated, and the historical patterns upon which the models are based may weaken or disappear. To the extent the portfolio invests in a concentration of **certain securities, regions or industries**, it is subject to increased volatility. To the extent the fund invests in **alternative strategies**, it may be exposed to potentially significant fluctuations in value. The manager may consider **environmental, social and governance (ESG) criteria** in the research or investment process; however, ESG considerations may not be a determinative factor in security selection. In addition, the manager may not assess every investment for ESG criteria, and not every ESG factor may be identified or evaluated. These and other risks are discussed in the fund's prospectus.

Glossary

Capital Expenditure (capex) are funds used by a company to acquire or upgrade physical assets such as property, industrial buildings or equipment.

Important Information

Effective May 1, 2024, the fund changed the fixed income component of its Blended Benchmark to the Bloomberg Multiverse (100% hedged to USD) Index. Prior to May 1, 2026 the benchmark was named Blended Benchmark.

The information provided is not a complete analysis of every material fact regarding any country, market, industry, security or fund. Because market and economic conditions are subject to change, comments, opinions and analyses are rendered as of the date of this material and may change without notice. A portfolio manager's assessment of a particular security, investment or strategy is not intended as individual investment advice or a recommendation or solicitation to buy, sell or hold any security or to adopt any investment strategy; it is intended only to provide insight into the fund's portfolio selection process. Holdings are subject to change.

The **Linked Franklin Global Allocation Fund Benchmark-NR** reflects the performance of 60% MSCI All Country World Index-NR, 30% Bloomberg Multiverse (100% hedged to USD) Index and 10% cash and cash equivalents from fund inception to 4/30/2026; and 39% Russell 3000 Index, 21% MSCI ACWI ex-US Index NR, 21% Bloomberg U.S. Aggregate Bond Index, 3% Bloomberg U.S. Corporate High Yield Index, 16% Bloomberg Global Aggregate ex-US (USD Hedged) thereafter. The **Bloomberg Multiverse (100% hedged to USD) Index** provides a broad-based measure of the global fixed income bond market. The **MSCI All Country World Index** is a market capitalization-weighted index that is designed to measure equity market performance of developed and emerging markets.

Morningstar Rating™: Source: Morningstar®, 09/30/2026. For each mutual fund and ETF with at least a 3-year history, Morningstar calculates a Morningstar Rating™ based on how a fund ranks on a Morningstar Risk-Adjusted Return measure against other funds in the same category. This measure takes into account variations in a fund's monthly performance, and does not take into account the effects of sales charges and loads, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The weights are: 100% 3-year rating for 36-59 months of total returns, 60% 5-year rating/40% 3-year rating for 60-119 months of total returns, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent 3-year period actually has the greatest impact because it is included in all three rating periods. The fund's Class A shares received a Morningstar Rating of 4, 4 and 3 and fund's Advisor Class shares received a Morningstar Rating of 5, 4 and 3 star(s) for the 3-, 5- and 10-year periods, respectively. Franklin Templeton provides this fund's Morningstar Rating™ for Class A and Advisor Class shares only. Other share classes may have different Morningstar ratings.
