

Western Asset Inflation-Linked Income Fund

WIA

Commentary | as of December 31, 2025

Key Takeaways

- **Markets:** Fixed-income market volatility persisted in the fourth quarter of 2025 as investors and policymakers navigated mixed economic signals. The longest US government shutdown, which restricted data availability, ended in November after 43 days. The US Treasury (UST) yield curve steepened, with short and intermediate UST yields finishing the quarter lower, while long-term yields increased. Equities performed well, with the S&P 500 Index reaching new highs, while credit spreads were mixed.
- **Contributors:** Yield-curve positioning along with allocations to structured products and corporate credits were all major drivers of relative performance.
- **Detractors:** There were no notable detractors during the quarter.
- **Outlook:** Western Asset's outlook remains constructive, though we recognize that growth momentum is tempered by uncertainty in areas such as geopolitics and fiscal sustainability. U.S. financial conditions are largely supportive, which, alongside proposed fiscal loosening and solid household balance sheets, points toward a positive foundation for growth in 2026. Headwinds remain, including doubts over the state of the U.S. labor market, core inflation lingering above target and the potential lagged impact of tariffs.

Performance Review

- Rates positioning had a positive impact on performance, mostly benefiting from a steeper yield curve.
- Corporate credit exposures (both investment-grade and high-yield) were additive to results, benefiting from positive issue selection.
- Structured products exposure in aggregate had a positive impact as spreads generally tightened.
- Emerging market (EM) exposures were additive to returns as USD-denominated spreads tightened.
- Commodities exposure was also beneficial, mainly due to a long position in copper.

Outlook

- Western Asset's outlook remains constructive, though we recognize that growth momentum is tempered by uncertainty in areas such as inflation, central bank policy, geopolitics and fiscal sustainability.
- Having cut rates at three successive meetings since September, the Federal Reserve may now moderate its pace of easing and await further signals from the post-shutdown data releases. Fiscal vulnerabilities and persistent inflation may see the yield curve steepen further.
- We continue to focus on disciplined, fundamental, relative value investing, seeking pockets of opportunity in fixed income while remaining mindful of technical and macroeconomic risks.

Performance shown represents past performance and is no guarantee of future results. Current performance may be higher or lower than the performance shown. Investment return and principal value will fluctuate so shares, when sold, may be worth more or less than the original cost. Returns based on Market Price or NAV, and assume the reinvestment of all distributions at the Dividend Reinvestment Plan Price or NAV, respectively. All returns include the deduction of management fees, operating expenses and all other fund expenses, and do not reflect the deduction of brokerage commissions or taxes that investors may pay on distributions or the sale of shares. When applicable, performance would have been lower if fees had not been waived in various periods. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expense or sales charges. Returns for periods of less than one year are not annualized. Please visit franklintempleton.com for the most recent month-end performance.

Gross expenses are the fund's total annual operating expenses as of the fund's annual report available at the time of publication. Actual expenses may be higher and may impact portfolio returns. Net expenses reflect voluntary fee waivers, expense caps and/or reimbursements. Voluntary waivers may be modified or discontinued at any time without notice.

The difference between total assets and net assets, if any, is due primarily to the fund's use of borrowings and other liabilities; netassets do not include borrowings. The fund may employ leverage in the form of loans, preferred stock, reverse repurchase agreements and/or other instruments. When the fund engages in transactions that have a leveraging effect on the fund's portfolio, the value of the fund will be more volatile and all other risks will tend to be compounded.

What are the Risks?

All investments involve risks, including possible loss of principal. Fixed income securities involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls. **Low-rated, high-yield bonds** are subject to greater price volatility, illiquidity and possibility of default. The fund is subject to the additional risks associated with **inflation-linked securities**, including liquidity risk, prepayment risk, extension risk and deflation risk. **International investments** are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in **emerging markets**. **Currency management** strategies could result in losses to the fund if currencies do not perform as expected. **Derivative instruments** can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. **Commodity-related investments** are subject to additional risks such as commodity index volatility, investor speculation, interest rates, weather, tax and regulatory developments. **Asset-backed, mortgage-backed or mortgage-related securities** are subject to prepayment and extension risks. **Leverage** increases the volatility of investment returns and subjects investments to magnified losses and a decline in value.

Important Information

The information provided is not a complete analysis of every material fact regarding any country, market, industry, security or fund. Because market and economic conditions are subject to change, comments, opinions and analyses are rendered as of the date of this material and may change without notice. A portfolio manager's assessment of a particular security, investment or strategy is not intended as individual investment advice or a recommendation or solicitation to buy, sell or hold any security or to adopt any investment strategy; it is intended only to provide insight into the fund's portfolio selection process. Holdings are subject to change.

Distributions are not guaranteed and are subject to change. The Closed-End Funds are not sold or distributed by Franklin Distributors, LLC, or any affiliate of Franklin Resources, Inc. Unlike open-end funds, shares are not continually offered. Like other public companies, closed-end funds have a one-time initial public offering, and once their shares are first issued, are generally bought and sold through non-affiliated broker/dealers and trade on nationally recognized stock exchanges. Share prices will fluctuate with market conditions and, at the time of sale, may be worth more or less than your original investment. Shares of exchange-traded closed-end funds may trade at a discount or premium to their original offering price, and often trade at a discount to their net asset value. Investment return, market price and net asset value will fluctuate with changes in market conditions. The Funds are subject to investment risks, including the possible loss of principal invested.

The **Bloomberg U.S. Government Inflation-Linked All Maturities Index** measures the performance of the U.S. TIPS market. The Index includes TIPS with one or more years remaining maturity with total outstanding issue size of \$500 million or more. The **Bloomberg U.S. Government Inflation-Linked 1-10 Year Index** measures the performance of the intermediate U.S. TIPS market.
