FRANKLIN TEMPLETON | WESTERN ASSET

Western Asset Inflation-Linked Opportunities & Income Fund

WIW **Commentary | as of September 30, 2026**

Key Takeaways

- **Markets:** During the third quarter, global markets remained heavily influenced by developments in the Middle East, as repeated military escalations and disruptions to global energy supplies drove renewed inflation concerns and a significant repricing of the interest-rate outlook. As a result, risk assets generally underperformed, aside from AI-related winners.
- **Contributors:** Yield-curve positioning, investment-grade credit, emerging market (EM) debt, commodities and structured products
- **Detractors:** Duration positioning, Treasury inflation-protected securities (TIPS), high-yield corporate credit
- **Outlook:** Global fixed-income markets are navigating heightened uncertainty driven by geopolitical tensions in the Middle East, rapid technological change and increased scrutiny of private credit markets. Energy-related supply disruptions have lifted near-term inflation and triggered a sharp reset in market expectations for central bank policy, with investors pricing rate hikes rather than the cuts anticipated earlier in the year.

Fund Characteristics	Fund
Distribution Frequency	Monthly

Performance Review

- Yield-curve positioning was a contributor, mostly benefiting from the underweight of the 5-year part of the curve, which underperformed.
- Tactical TIPS positioning was a modest detractor.
- Allocation to investment-grade credit contributed due to security selection.
- Allocation to high-yield credit detracted as spreads widened.
- EM debt allocation was a contributor due to security selection.
- Commodities exposure was a contributor, mainly due to a long position in copper.
- Structured product allocation contributed as spreads generally tightened.
- Duration positioning netted to a detractor.

Outlook

- While near-term inflation pressures are evident, longer-term inflation expectations remain well anchored, and we believe the magnitude of the recent rate repricing may be somewhat overdone.
- Global growth is expected to moderate, with the US remaining relatively more resilient than other regions due to energy independence, fiscal support and strong underlying fundamentals.
- Despite tight valuations across spread sectors, credit fundamentals remain supportive.
- We favor selectively adding short-end duration and taking advantage of high-quality opportunities in corporate new issuance, AI-related financing activity and select areas of securitized credit, including commercial mortgage-backed securities and collateralized loan obligations.

Performance shown represents past performance and is no guarantee of future results. *Current performance may be higher or lower than the performance shown. Investment return and principal value will fluctuate so shares, when sold, may be worth more or less than the original cost. Returns based on Market Price or NAV, and assume the reinvestment of all distributions at the Dividend Reinvestment Plan Price or NAV, respectively. All returns include the deduction of management fees, operating expenses and all other fund expenses, and do not reflect the deduction of brokerage commissions or taxes that investors may pay on distributions or the sale of shares. When applicable, performance would have been lower if fees had not been waived in various periods. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expense or sales charges. Returns for periods of less than one year are not annualized. Please visit franklintempleton.com for the most recent month-end performance.*

The difference between total assets and net assets, if any, is due primarily to the fund's use of borrowings and other liabilities; netassets do not include borrowings. The fund may employ leverage in the form of loans, preferred stock, reverse repurchase agreementsand/or other instruments. When the fund engages in transactions that have a leveraging effect on the fund's portfolio, the value of thefund will be more volatile and all other risks will tend to be compounded.

What are the Risks?

All investments involve risks, including possible loss of principal. Fixed income securities involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls. **Low-rated, high-yield bonds** are subject to greater price volatility, illiquidity and possibility of default. **Liquidity risk** exists when securities or other investments become more difficult to sell, or are unable to be sold, at the price at which they have been valued. **International investments** are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in **emerging markets. Currency management** strategies could result in losses to the fund if currencies do not perform as expected. **Derivative instruments** can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. **Asset-backed, mortgage-backed or mortgage-related securities** are subject to prepayment and extension risks. **Leverage** increases the volatility of investment returns and subjects investments to magnified losses and a decline in value.

Glossary

A **collateralized loan obligation (CLO)** is a single security backed by a pool of debt.

Commercial mortgage-backed securities (CMBS) are a type of mortgage-backed security backed by commercial mortgages rather than residential real estate. CMBS tend to be more complex and volatile than residential mortgage-backed securities due to the unique nature of the underlying property assets.

Duration is a measure of the sensitivity of a bond's price to changes in interest rates.

Important Information

The information provided is not a complete analysis of every material fact regarding any country, market, industry, security or fund. Because market and economic conditions are subject to change, comments, opinions and analyses are rendered as of the date of this material and may change without notice. A portfolio manager's assessment of a particular security, investment or strategy is not intended as individual investment advice or a recommendation or solicitation to buy, sell or hold any security or to adopt any investment strategy; it is intended only to provide insight into the fund's portfolio selection process. Holdings are subject to change.

The Closed-End Funds are not sold or distributed by Franklin Distributors, LLC, or any affiliate of Franklin Templeton, Inc. Unlike open-end funds, shares are not continually offered. Like other public companies, closed-end funds have a one-time initial public offering, and once their shares are first issued, are generally bought and sold through non-affiliated broker/dealers and trade on nationally recognized stock exchanges. Share prices will fluctuate with market conditions and, at the time of sale, may be worth more or less than your original investment. Shares of exchange-traded closed-end funds may trade at a discount or premium to their original offering price, and often trade at a discount to their net asset value. Investment return, market price and net asset value will fluctuate with changes in market conditions. The Funds are subject to investment risks, including the possible loss of principal invested. **Distributions are not guaranteed and are subject to change.**

The **Bloomberg U.S. Government Inflation-Linked All Maturities Index** measures the performance of the U.S. TIPS market. The Index includes TIPS with one or more years remaining maturity with total outstanding issue size of $500 million or more. The **Bloomberg U.S. Government Inflation-Linked 1-10 Year Index** measures the performance of the intermediate U.S. TIPS market.
