

Western Asset Total Return Unconstrained Fund

Class I: WAARX Class A: WAUAX

Commentary | as of September 30, 2025

Key Takeaways

- Markets: During the third quarter, volatility in both equity and Treasury markets remained relatively subdued. Risk
 assets performed well, with the S&P 500 Index reaching new highs and credit spreads tightening. US job growth
 weakened in August, with nonfarm payrolls rising by 22,000 jobs—lower than July's upwardly revised figure of 79,000
 (from 73,000). The Federal Open Market Committee (FOMC) lowered its policy rate by 25 bps at its September meeting,
 setting the target range for the federal funds rate at 4.00% to 4.25%.
- Contributors: The portfolio's exposure to investment grade corporate bonds contributed to performance.
- Detractors: The portfolio's exposure to non-U.S. developed market (DM) positions was a headwind for returns.
- Outlook: U.S. financial conditions are largely supportive, which, alongside fiscal loosening and solid household balance sheets, points toward a positive foundation for growth. Headwinds remain, including doubts over the state of the U.S. labor market, core inflation lingering close to 3% and the potential lagged impact of tariffs. This backdrop should keep the Federal Reserve on a rate-cutting path, albeit with a cautious view of the inflation outlook.

Fund Characteristics	Fund		
Distribution Frequency	Daily		
30-Day SEC Yield (Class I)—With Waiver	4.52%		
30-Day SEC Yield (Class I)—Without Waiver	4.30%		

Performance Review

- The portfolio's exposure to investment grade corporate bonds contributed to performance.
- Duration positioning had a positive impact on performance as yields fell.
- Agency mortgage-backed securities (MBS) positioning had a positive impact on performance as spreads tightened.
- The portfolio's yield-curve positioning had a positive impact on performance as yields fell.
- The portfolio's non-US DM positions had a negative impact on performance as gilt yields rose.

Outlook

- Western Asset's outlook remains constructive, though we recognize that growth momentum is tempered by uncertainty in areas such as inflation, central bank policy, geopolitics and fiscal sustainability.
- Fiscal vulnerabilities and persistent inflation may see the yield curve steepen further. European growth is expected to benefit
 from German and E.U. fiscal support with the European Central Bank judging the eurozone economy to be "in a good place."
- We continue to focus on disciplined, fundamental, relative value investing, seeking pockets of opportunity in fixed income
 while remaining mindful of technical and macroeconomic risks.

Performance data quoted represents past performance, which does not guarantee future results. Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. Returns with sales charge reflect a deduction of the stated maximum sales charge. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges. Returns for periods of less than one year are not annualized. All classes of shares may not be available to all investors or through all distribution channels. For current month-end performance, please visit franklintempleton.com.

Net expenses are the fund's total annual operating expenses as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns. Net expenses reflect contractual fee waivers, expense caps and/or reimbursements, which cannot be terminated prior to 12/31/2026 without Board consent. Additional amounts may be voluntarily waived and/or reimbursed and may be modified or discontinued at any time without notice.

What are the Risks?

All investments involve risks, including possible loss of principal. Fixed income securities involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls. Asset-backed, mortgage-backed or mortgage-related securities are subject to prepayment and extension risks. Low-rated, high-yield bonds are subject to greater price volatility, illiquidity and possibility of default. International investments are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets. Derivative instruments can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. Leverage increases the volatility of investment returns and subjects investments to magnified losses and a decline in value. These and other risks are discussed in the fund's prospectus.

Glossary

Duration is a measure of the sensitivity of a bond's price to changes in interest rates.

The **federal funds rate** is the interest rate at which a depository institution lends funds maintained at the Federal Reserve to another depository institution overnight. Also known as the "fed funds rate".

Investment grade is a rating that indicates that a municipal or corporate bond has a relatively low risk of default. BBB is medium credit quality rating.

The **\$&P 500 Index** features 500 leading U.S. publicly traded companies, with a primary emphasis on market capitalization. Source: © **\$&P** Dow Jones Indices LLC. All rights reserved. The **yield curve** shows the relationship between yields and maturity dates for a similar class of bonds.

Important Information

The information provided is not a complete analysis of every material fact regarding any country, market, industry, security or fund. Because market and economic conditions are subject to change, comments, opinions and analyses are rendered as of the date of this material and may change without notice. A portfolio manager's assessment of a particular security, investment or strategy is not intended as individual investment advice or a recommendation or solicitation to buy, sell or hold any security or to adopt any investment strategy; it is intended only to provide insight into the fund's portfolio selection process. Holdings are subject to change.

The ICE BofA US Dollar 3-Month Deposit Offered Rate Constant Maturity Index tracks the performance of a synthetic asset paying Libor to a stated maturity. The index is based on the assumed purchase at par of a synthetic instrument having exactly its stated maturity and with a coupon equal to that day's fixing rate. That issue is assumed to be sold the following business day (priced at a yield equal to the current day fixing rate) and rolled into a new instrument. Important data provider notices and terms available at www.franklintempletondatasources.com. All data is subject to change.

Maximum sales charges have been updated as of August 15, 2022, please refer the Fund's prospectus for more information.

The **30-day SEC yield** is calculated using the net income (interest and dividends) per share earned over a trailing 30-day period (annualized), divided by the fund's share price at the end of that period. It may not equal the fund's actual income distribution rate, which reflects the fund's past dividends paid to shareholders.
