### Morningstar Style Map™

As of 6/30/25

- Weighted average of holdings
- The center 75% of holdings
- Weighted average of holdings for Russell 2000 Value

The Morningstar Style Map is the Morningstar Style Box™ with the center 75% of fund holdings plotted as the Morningstar Ownership Zone™. The Morningstar Style Box is designed to reveal a fund's investment strategy. The Morningstar Ownership Zone provides detail about a portfolio's investment style by showing the range of stock sizes and styles. The Ownership Zone is derived by plotting each stock in the portfolio within the proprietary Morningstar Style Box. Over time, the shape and location of a fund's ownership zone may vary.

### Why invest in Royce Small-Cap Special Equity Fund?

- Small-cap value fund that looks for conservatively managed companies with transparent accounting that have a viable niche or franchise whose stock can be bought below its economic value. Small-cap stocks' market caps are less than the largest stock in the Russell 2000® Index.
- Seeks companies with superior balance sheets, sustainable returns on invested capital, and strong levels of free cash flow from operations, among other attributes.
- Average annual total return of 7.3% since inception (5/1/98) through 9/30/25.

### Performance and Expenses by Share Class

### Important Performance and Expense Information

All performance information reflects past performance, is presented on a total return basis, reflects the reinvestment of distributions, and does not reflect the deduction of taxes that a shareholder would pay on fund distributions or the redemption of fund shares. Past performance is no guarantee of future results. Investment return and principal value of an investment will fluctuate, so that shares may be worth more or less than their original cost when redeemed. Consultant Class shares redeemed within 365 days of purchase may be subject to a 1% contingent deferred sales charge, payable to the Fund's distributor, Royce Fund Services, LLC, which is not reflected in the performance shown above; if it were, performance would be lower. Current month-end performance may be higher or lower than performance quoted and may be obtained at [www.royceinvest.com](http://www.royceinvest.com). Gross operating expenses reflect the Fund's gross total annual operating expenses for the Consultant Class and include management fees, 12b-1 distribution and service fees, and other expenses. Net operating expenses reflect contractual fee waivers and/or expense reimbursements. All expense information is reported as of the Fund's most current prospectus. Royce has contractually agreed to waive fees and/or reimburse operating expenses (excluding brokerage commissions taxes interest, litigation expenses, acquired fund fees and expenses, and other expenses not borne in the ordinary course of business) at or below 2.24% through April 30, 2026.

All performance and risk information presented in this material prior to the commencement date of Consultant Class shares on 6/2/03 reflects Investment Class results. Consultant Class shares bear annual expenses that are higher than those borne by Investment Class shares. If annual expenses for Consultant Class had been reflected, total returns prior to 6/2/03 would have been lower.

"A deep understanding of accounting principles gives me a chance to get at the veracity of a company's finances by scrutinizing the financial reports... I spend a lot of time going over the numbers. Frankly, I benefit, because I don't believe everyone does this kind of work."

—Charlie Dreifus

1. Royce classifies a client account as 'Value' because it anticipates it will have a weighted average price-to-book ratio or weighted average normalized price-to-earnings ratio lower than its general asset class. 2. **Geometric Average.** This weighted calculation uses each portfolio holding's market cap in a way designed to not skew the effect of very large or small holdings; instead, it aims to better identify the portfolio's center, which Royce believes offers a more accurate measure of average market cap than a simple mean or median. 3. **Low Volatility.** The Fund was in the lowest volatility quintile compared with all funds in Morningstar's Small Growth, Small Blend, and Small Value Categories with at least five years of history, a total of 481 funds as of 9/30/25. The universe consists of each fund's oldest share class only. Volatility quintiles are based on the average five-year standard deviation for each of the last four calendar quarters. Higher volatility is usually associated with higher risk. 4. **Active Share** is the sum of the absolute values of the different weightings of each holding in the Portfolio versus each holding in the benchmark, divided by two. 5. Mr. Dreifus has been the Fund's manager since inception. 6. **Harmonic Average.** This weighted calculation evaluates a portfolio as if it were a single stock and measures it overall. It compares the total market value of the portfolio to the portfolio's share in the earnings or book value, as the case may be, of its underlying stocks. 7. The **Price-to-Earnings Ratio** is calculated by dividing a company's share price by its trailing 12-month earnings-per-share (EPS) and also excludes companies with zero or negative earnings (8% of Portfolio holdings as of 9/30/25). 8. The **Price-to-Book Ratio** is calculated by dividing a company's share price by its book value per share (3% of Portfolio holdings were excluded as of 9/30/25).

Market Cycle<sup>1</sup> Performance (%)

	RSQCX	RUSSELL 2000 VALUE
11/25/24-9/30/25 (Peak-to-Current)	-4.5	-0.7
11/8/21-11/25/24 (Peak-to-Peak)	10.9	9.9
8/22/18-11/8/21 (Peak-to-Peak)	24.6	37.6
6/23/15-8/22/18 (Peak-to-Peak)	23.5	39.0

<sup>1</sup>Royce defines market cycles as peak-to-peak periods in which a peak is the market high prior to a decline of at least 15%.

Upside/Downside Capture Ratio

Fund's First Full Quarter (6/30/98) to 9/30/25 (%)

This material is not authorized for distribution unless preceded or accompanied by a current prospectus. Please read the prospectus carefully before investing or sending money. The Fund invests primarily in small-cap stocks, which may involve considerably more risk than investing in larger-cap stocks. (Please see "Primary Risks for Fund Investors" in the prospectus.) As of 9/30/25, the Fund invested a significant portion of its assets in a limited number of stocks, which may involve considerably more risk than a more broadly diversified portfolio because a decline in the value of any of these stocks would cause the Fund's overall value to decline to a greater degree.

The Morningstar Style Map uses proprietary scores of a stock's value and growth characteristics to determine its placement in one of the five categories listed on the horizontal axis. These characteristics are then compared to those of other stocks within the same market capitalization band. Each is scored from zero to 100 for both value and growth attributes. The value score is subtracted from the growth score to determine the overall style score. For the vertical, market cap axis, Morningstar subdivides into size groups. Giant-cap stocks are defined as those that account for the top 40% of the capitalization of each style zone; large-cap stocks represent the next 30%; mid-cap stocks the next 20%; small-cap stocks the next 7%; micro-cap stocks the smallest 3%. The Sharpe Ratio is calculated for a specified period by dividing a portfolio's average excess returns by its annualized standard deviation. The higher the Sharpe Ratio, the better the portfolio's historical risk-adjusted performance. Market Capitalization is calculated by multiplying a company's share price by its shares outstanding. Upside Capture Ratio measures a manager's performance in up markets relative to the Fund's benchmark (Russell 2000). It is calculated by measuring the Fund's performance in quarters when the benchmark goes up and dividing it by the benchmark's return in those quarters. Downside Capture Ratio measures a manager's performance in down markets relative to the Fund's benchmark (Russell 2000). It is calculated by measuring the Fund's performance in quarters when the benchmark goes down and dividing it by the benchmark's return in those quarters. Standard deviation is a statistical measure within which a client account's total returns have varied over time. The greater the standard deviation, the greater a portfolio's volatility. Please read the prospectus for a more complete discussion of risk.
