## Why invest in Royce International Premier Fund?

- Focuses on a limited number of premier non-U.S. small-cap companies (generally market caps up to \$5 billion) with discernible competitive advantages, high returns on invested capital, and sustainable, moat-like franchises.
- Seeks to identify companies with notable strengths in industry structure, competitive positioning, operational efficiency, financial track record, and corporate governance.
- Average annual total return of 4.3% since inception (12/31/10) through 3/31/26.

## Important Performance and Expense Information

All performance information reflects past performance, is presented on a total return basis, reflects the reinvestment of distributions, and does not reflect the deduction of taxes that a shareholder would pay on fund distributions or the redemption of fund shares. Past performance is no guarantee of future results. Investment return and principal value of an investment will fluctuate, so that shares may be worth more or less than their original cost when redeemed. Current month-end performance may be higher or lower than performance quoted and may be obtained at [www.royceinvest.com](http://www.royceinvest.com). Gross operating expenses for the Investment (RIPNX), Service (RYIPX), or Institutional (RIPIX) Class reflect the Fund's gross total annual operating expenses and include management fees and other expenses for the Investment or Institutional Class and management fees, 12b-1 distribution and service fees, and other expenses for the Service Class. Net operating expenses reflect contractual fee waivers and/or expense reimbursements. All expense information is reported as of the Fund's prospectus dated May 1, 2025. Royce has contractually agreed to waive fees and/or reimburse operating expenses to the extent necessary to maintain the Investment, Service, and Institutional Classes' net annual operating expenses (excluding brokerage commissions, taxes, interest, litigation expenses, acquired fund fees and expenses, and other expenses not borne in the ordinary course of business) at or below 1.04%, 1.19%, and 1.44%, respectively, through April 30, 2026.

All performance and risk information presented in this material prior to the commencement date of Investment Class shares on 1/22/14 and Institutional Class shares on 5/1/18 reflects Service Class results. Service Class shares bear an annual distribution expense that is not borne by Investment Class shares. The Investment and Institutional Classes would have substantially similar returns because all classes invest in the same portfolio of securities, differing only to the extent that the classes have different expenses. All performance charts reflect the Service Class.

## Morningstar Style Map™

As of 12/31/25

The Morningstar Style Map is the Morningstar Style Box™ with the center 75% of fund holdings plotted as the Morningstar Ownership Zone™. The Morningstar Style Box is designed to reveal a fund's investment strategy. The Morningstar Ownership Zone provides detail about a portfolio's investment style by showing the range of stock sizes and styles. The Ownership Zone is derived by plotting each stock in the portfolio within the proprietary Morningstar Style Box. Over time, the shape and location of a fund's ownership zone may vary.

Germany	3.0	2.4

<sup>1</sup>Represents countries that are 3% or more of net assets.

<sup>2</sup>Securities are categorized by the country of their headquarters.

1. Royce classifies a client account as 'Core' because it anticipates the client account equity holdings will have a weighted average price-to-book ratio or weighted average normalized price-to-earnings ratio that is similar to, or somewhat higher than, its general asset class. 2. **Geometric Average.** This weighted calculation uses each portfolio holding's market cap in a way designed to not skew the effect of very large or small holdings; instead, it aims to better identify the portfolio's center, which Royce believes offers a more accurate measure of average market cap than a simple mean or median. 3. **Average Volatility.** The Fund was in the middle volatility quintile compared with all funds in Morningstar's Foreign Small/Mid Growth, Foreign Small/Mid Blend, and Foreign Small/Mid Value Categories with at least five years of history, a total of 69 funds as of 3/31/26. The universe consists of each fund's oldest share class only. Volatility quintiles are based on the average five-year standard deviation for each of the last four calendar quarters. Higher volatility is usually associated with higher risk. 4. **Active Share** is the sum of the absolute values of the different weightings of each holding in the Portfolio versus each holding in the benchmark, divided by two.

**Top 10 Positions**

We are long-term investors who screen for non-U.S. small-caps with high returns on invested capital and low debt that offer mission-critical products or services to a loyal customer base.

—Mark Fischer

**This material is not authorized for distribution unless preceded or accompanied by a current prospectus. Please read the prospectus carefully before investing or sending money.** The Fund may invest a significant portion of its assets in foreign companies which may be subject to different risks than investments in securities of U.S. companies, including adverse political, social, economic, or other developments that are unique to a particular country or region. These risk factors may affect the prices of foreign securities issued by companies headquartered in developing countries more than those headquartered in developed countries. (Please see "Investing in Foreign Securities" in the prospectus.) Therefore, the prices of the securities of foreign companies in particular countries or regions may, at times, move in a different direction than those of the securities of U.S. companies. (Please see "Primary Risks for Fund Investors" in the prospectus.) The Fund invests primarily in small-cap stocks, which may involve considerably more risk than investing in larger-cap stocks. The Fund also generally invests a significant portion of its assets in a limited number of stocks, which may involve considerably more risk than a more broadly diversified portfolio because a decline in the value of any one of these stocks would cause the Fund's overall value to decline to a greater degree. (Please see "Primary Risks for Fund Investors" in the prospectus.)

The **Morningstar Style Map** uses proprietary scores of a stock's value and growth characteristics to determine its placement in one of the five categories listed on the horizontal axis. These characteristics are then compared to those of other stocks within the same market capitalization band. Each is scored from zero to 100 for both value and growth attributes. The value score is subtracted from the growth score to determine the overall style score. For the vertical, market cap axis, Morningstar subdivides into size groups. Giant-cap stocks are defined as those that account for the top 40% of the capitalization of each style zone; large-cap stocks represent the next 30%; mid-cap stocks the next 20%; small-cap stocks the next 7%; micro-cap stocks the smallest 3%. **Market Capitalization** is calculated by multiplying a company's share price by its shares outstanding. **Standard deviation** is a statistical measure within which a client account's total returns have varied over time. The greater the standard deviation, the greater a portfolio's volatility. Please read the prospectus for a more complete discussion of risk. Source: MSCI.
