

Western Asset Total Return ETF (WBND)

Multi-Sector Factsheet as of September 30, 2023

Investment Overview

The Western Asset Total Return ETF (WBND) is an actively managed strategy that seeks to maximize total return consistent with prudent investment management and liquidity needs.

WBND may benefit investors who seek to maximize total return via an actively managed, well-diversified core fixed income strategy that includes exposure to opportunistic, out of benchmark, debt sectors combined with the potential liquidity, transparency, and cost benefits of an ETF.

Investment Process:

The Investment team leverages Western Asset's global investment capabilities and strong risk management program, employing an active process that is both top-down and bottom-up to help identify attractive opportunities and manage risk.

Active management of duration, sector and security selection including greater exposure to out of benchmark sectors offers greater flexibility to respond to dynamic market conditions.

Exposures that can expand beyond traditional sectors including high yield, inflation-linked, bank loans, non-U.S. bonds, and other non-benchmark sectors and securities can allow for compelling performance, yield and added diversification.

Growth of \$10,000

Inception through September 30, 2023

Market Price Returns, assuming dividends reinvested

The Growth of \$10,000 chart reflects a hypothetical \$10,000 investment on Market Price and assumes reinvestment of dividends and capital gains. Fund expense, including management fees and other expenses were deducted.

Total Returns (%)

	Cumulative			Average Annual				Inception	Inception Date
	3-Mth	6-Mth	YTD	1-Yr	3-Yr	5-Yr	10-Yr		
Market Price Return	-4.21	-4.96	-1.79	2.39	-8.35	—	—	-1.10	10/3/2018
NAV Returns	-4.08	-5.16	-2.09	1.30	-8.33	—	—	-1.15	10/3/2018
Benchmark	-3.23	-4.05	-1.21	0.64	-5.21	—	—	0.21	—

Calendar Year Total Returns (%)

	2022	2021	2020	2019	2018	2017	2016	2015	2014	2013

Benchmark	-13.01	-1.54	7.51	8.72	—	—	—	—	—	—

Performance data represents past performance, which does not guarantee future results. Current performance may differ from figures shown. The fund's investment return and principal value will change with market conditions, and you may have a gain or a loss when you sell your shares. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges. Please call Franklin Templeton at (800) DIAL BEN/(800) 342-5236 or visit franklintempleton.com for the most recent month-end performance.

Retail investors buy and sell shares of ETFs at market price (not NAV) in the secondary market throughout the trading day. These shares are not individually available for purchase or redemption directly from the ETF. Market price returns are typically based upon the mid-point between the bid and ask on the fund's principal trading market when the fund's NAV is determined, which is typically 4 pm eastern time (US). These returns will not represent your returns had you traded shares at other times.

Gross expenses are the fund's total annual operating expenses as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns. Net expenses reflect contractual fee waivers, expense caps and/or reimbursements, which cannot be terminated prior to 07/31/2024 without Board consent. Additional amounts may be voluntarily waived and/or reimbursed and may be modified or discontinued at any time without notice.

Portfolio Data Information

Credit Quality is a measure of a bond issuer's ability to repay interest and principal in a timely manner. The credit ratings shown are based on each portfolio security's rating as provided by Standard and Poor's, Moody's Investors Service and/or Fitch Ratings, Ltd. and typically range from AAA (highest) to D (lowest), or an equivalent and/or similar rating. For this purpose, if two or more of the agencies have assigned differing ratings to a security, the highest rating is used. Securities that are unrated by all three agencies are reflected as such. The credit quality of the investments in the fund's portfolio does not apply to the stability or safety of the fund. These ratings are updated monthly and may change over time. **Please note, the Fund itself has not been rated by an independent rating agency.**

Portfolio Description

Western Asset Management is one of the world's leading global fixed income managers. Founded in 1971, the firm is known for team management and proprietary research, supported by robust risk management and a long-term fundamental value approach. Each group of sector specialists utilizes their expertise in bottom-up analysis of each portfolio sector.

What should I know before investing?

All investments involve risks, including possible loss of principal. The fund is newly organized, with a limited history of operations. **Fixed income securities** involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls. **Low-rated, high-yield bonds** are subject to greater price volatility, illiquidity and possibility of default. **International investments** are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in **emerging markets**. **Derivative instruments** can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. **Leverage** increases the volatility of investment returns and subjects investments to magnified losses and a decline in value. **Active and frequent trading** may increase a shareholder's tax liability and transaction costs. **Asset-backed, mortgage-backed or mortgage-related securities** are subject to prepayment and extension risks. **Active management** does not ensure gains or protect against market declines. **Diversification** does not guarantee a profit or protect against a loss. These and other risks are discussed in the fund's prospectus.

Glossary

Standard Deviation: Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return. **Beta** A measure of the fund's volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market. The **30-day SEC yield** is calculated using the net income (interest and dividends) per share earned over a trailing 30-day period (annualized), divided by the fund's share price at the end of that period. It may not equal the fund's actual income distribution rate, which reflects the fund's past dividends paid to shareholders. **Average Life**: An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings. **Effective Duration** is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes.

Important Information

ETFs trade like stocks, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.

ETF shares may be bought or sold throughout the day at their market price, not their Net Asset Value (NAV), on the exchange on which they are listed. Shares of ETFs are tradable on secondary markets and may trade either at a premium or a discount to their NAV on the secondary market.

Canada: This content is intended only for Canadian institutional investors that qualify as "permitted clients" as defined in National Instrument 31-103 - Registration Requirements, Exemptions and Ongoing Registrant Obligations. U.S. securities laws generally limit a non-U.S. fund's purchase of a U.S. registered mutual fund or ETF (a "U.S. Fund") to no more than 3% of the U.S. Fund's voting stock. You should consult your legal counsel prior to investing in a U.S. Fund.

Negative Cash Weightings: The negative cash position reflects a temporary position that is a result of a delay in securities settlement transactions.

The **Bloomberg U.S. Aggregate Bond Index** is an unmanaged index that measures the performance of the investment-grade universe of bonds issued in the United States. The index includes institutionally traded U.S. Treasury, government sponsored, mortgage and corporate securities. Source: Bloomberg Indices.
