ClearBridge Value Portfolios

ClearBridge

Separately Managed Accounts | Fact Sheet as of March 31, 2025

Investment overview

The ClearBridge Value Portfolios focus on large- mid and small-capitalization stocks.

Investment objective

The strategy seeks long-term capital growth. Current income is a secondary consideration.

Investment philosophy

We believe that:

The stock market is a complex adaptive system

- · It dynamically aggregates the views of participants, providing assessments of investment value.
- As such, markets broadly adjust quickly to reflect new information, making it challenging for informationdriven investment strategies to earn excess returns.

Inefficiencies occur in markets

• Inefficiencies occur, particularly when diversity of thought breaks down (e.g., investors panic or get greedy all at once), as well as when the time horizon extends beyond the market's often myopic frame.

To generate excess returns consistently, we must find and exploit these inefficiencies

 We do this through an explicit analysis of market expectations, compared with the expectations we have developed through our review of the company's economic returns, capital allocation and competitive strategy.

Portfolio positioning

- · Designed for investors seeking a core value portfolio, with the ability to invest in all market capitalizations
- · A core value portfolio
- Offers a long-term buy-and-hold strategy, which may reduce portfolio turnover¹

Key differentiators

Process

 Repeatable, proprietary process designed to form explicit variant perceptions relative to expectations embedded in the stock price

Team

 Robust, frequent communication to surface diverse perspectives and to improve the questions we ask and the assumptions we make

Portfolio Construction

Diversification across industries, economic drivers and macroeconomic and quantitative factors to build a
resilient portfolio that maximizes risk-adjusted returns and seeks to outperform in a variety of market
conditions

Management team

ClearBridge Investments is a well-established global investment manager focusing on proprietary research and fundamental investing. With over 60 years of experience building portfolios for clients seeking income solutions, high active share or low volatility, long-tenured portfolio managers provide strong leadership in a centralized investment structure.

Investment management team

Reed Cassady, CFA Managing Director Portfolio Manager Industry since 2007

Sam Peters, CFA Managing Director Portfolio Manager Industry since 1993

Jean Yu, CFA, PhD Managing Director Portfolio Manager Industry since 2022

Effective September 30, 2024, ClearBridge All Cap Value Portfolios was renamed ClearBridge Value Portfolios. There was no change to the investment objective, principal investment strategies or investment policies.

Active share is a measure of the percentage of stock holdings in a manager's portfolio that differs from the benchmark index.

Diversification does not ensure a profit or protect against market loss.

¹ Market, security and/or other investment considerations may result in higher turnover from time to time. Also, all capitalization ranges will not necessarily be represented in an individual account.

Investment process

STEP

Discovery: Diversity Breakdowns and Embedded Expectations

Look for diversity breakdowns:

- High-level industry trends and competitive strategy
- Quantitative screens covering multiple sources
 of return and risk

Embedded expectations for growth, returns and investment needs

Valuation: Probabilistic Analysis of Business Value and Variant Perception Valuation:

 Multiple analytical tools to understand drivers of business value

Probabilistic Approach:

 Build scenario analysis and simulations to explore business value under different assumptions

Variant Perception:

- Develop an explicit narrative of how investment case differs from embedded expectations Systematic Updating:
- Actively recalibrate model and probabilities based on new information

E S

Portfolio Construction: Balance of Risk and Return

- Bottom-up weighting decisions to maximize riskadjusted potential return across industries and economic drivers of returns, as well as macroeconomic and quantitative factor exposures relative to strategy's benchmark
- Robust team discussions help avoid individual behavioral biases: overconfidence, anchoring, loss aversion, framing effects, confirmation bias

The investment process may change over time. The characteristics set forth above are intended as a general illustration of some of the criteria the strategy team considers in selecting securities for client portfolios. There is no guarantee that investment objectives will be achieved.

The strategy returns shown are preliminary composite returns, subject to future revision (downward or upward). Past performance is not a guarantee of future results. An investment in this strategy can lose value. Please visit www.franklintempleton.com for the latest performance figures. Investors cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges.

¹ Fees: Periods less than one year are not annualized. Performance results are for the composite which includes all actual, fully discretionary accounts with substantially similar investment policies and objectives managed to the composite is investment strategy. Composite returns are stated in U.S. dollars and assume reinvestment of any dividends, interest income, capital gains, or other earnings. The composite may include account(s) that are gross of fees and pure gross of fees. "Pure" gross-of-fee returns do not reflect the deduction of any expenses, including transaction costs. A traditional (or "true") gross-of-fee return reflects performance after the reduction of transaction costs but before the reduction of the investment advisory fee. The gross-of-fee return may include a blend of "true" gross-of-fee returns for non-wrap accounts and "pure" gross-of-fee returns for map accounts and "pure" gross-of-fee returns for map accounts and "pure" gross-of-fee returns for map accounts and "pure" gross-of-fee returns for non-wrap accounts and "pure" gross-of-fee returns for map accounts. Net-of-fee returns is reduced by a model "wrap fee" (3.0% is the maximum anticipated wrap fee for equity and balanced portfolios) which includes trading expenses as well as investment management, administrative and custodial fees. The model wrap fee used represents the highest anticipated wrap fee applicable to the strategy. Actual fees and account minimums may vary. For fee schedules, contact your financial professional, or if you enter into an agreement directly with Franklin Templeton Private Portfolio Group, LLC ("FTPPG"), refer to FTPPG's Form ADV

Terms and definitions:

Dividend yield is determined by dividing a stock's annual dividends per share by the current market price per share. Dividend yield is a financial ratio that shows how much a company pays out in dividends.

P/E (Year 1) is the previous day's closing price of the stock divided by the consensus earnings per share (EPS) of fiscal year 1 (FY1) provided by I/B/E/S. Forecasts are inherently limited and should not be relied upon as indicators of future performance.

The **price-to-book ratio** (**P/B**) is a stock's price divided by the stock's per share book value. Earnings per share (EPS) is the portion of a company's profit allocated to each outstanding share of a common stock.

Weighted median market capitalization represents the value at which half the portfolio's market capitalization weight falls above, and half falls below.

Weighted average market capitalization represents the average value of the companies held in the portfolio. When that figure is weighted, the impact of each company's capitalization on the overall average is proportional to the total market value of its shares.

Market capitalization measures the number of outstanding common shares of a given corporation multiplied by the latest price per share.

Standard deviation measures the risk or volatility of an investment's return over a particular time period; the greater the number, the greater the risk.

The **up-capture ratio** measures the manager's overall performance to the benchmark's overall performance, considering only quarters that are positive in the benchmark. An up-capture ratio of more than 100 indicates a manager who outperforms the relative benchmark in the benchmark's positive quarters.

The **down-capture ratio** is the ratio of the manager's overall performance to the benchmark's overall performance, considering only quarters that are negative in the benchmark. A down-capture ratio of less than 100 indicates a manager who outperforms the relative benchmark in the benchmark's negative quarters and protects more of a portfolio's value during down markets.

Alpha is a measure of performance vs. a benchmark on a risk-adjusted basis. A positive alpha of 1.0 means the portfolio has outperformed its benchmark index by 1%. Correspondingly, a similar negative alpha would indicate an underperformance of 1%. Alpha is a measure of the difference between actual returns and expected performance measuring sensitivity to index movements.

Beta measures the sensitivity of an investment to the movement of its benchmark. A beta higher than 1.0 indicates the investment has been more volatile than the benchmark and a beta of less than 1.0 indicates that the investment has been less volatile than the benchmark.

Sharpe ratio is a risk-adjusted measure, calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better a portfolio's historical risk-adjusted performance.

R-squared measures the strength of the linear relationship between a fund and its benchmark. R-squared at 1.00 implies perfect linear relationship and zero implies no relationship exists.

The **Russell 1000 Value Index** measures the performance of the large-cap value segment of the U.S. equity universe. Source: FTSE.

The **Russell 3000 Value Index** measures the performance of the broad value segment of U.S. equity value universe. Source: FTSE.

What are the risks?

All investments involve risks, including possible loss of principal. Small- and mid-cap stocks involve greater risks and volatility than large-cap stocks. International investments are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets.
