ClearBridge Dividend Strategy ESG ETF (YLDE)

Investment Overview

ClearBridge Dividend Strategy ESG ETF (YLDE) is an actively managed strategy that seeks attractive income growth and capital appreciation over time by seeking to invest in dividend paying stocks with positive ESG attributes. YLDE may benefit investors targeting dividend income, growth of dividend income and long-term capital appreciation along with engaged, impactful investing in an active, tax-efficient structure. Strategic Differentiators: Targets compelling dividends. Seeks companies with the potential to pay a rising stream of dividends. Fosters engaged, impactful investing. Allows investors to simultaneously pursue financial return and social good. Access to a proven approach in an active, tax-efficient structure with low minimum investment. Investment Process: To start, large-cap companies with compelling dividends that have been growing are evaluated for strong balance sheets, dominant market positions and potential for dividend growth through innovative products and services. Select from these candidates those with attractive valuations. Re-examine a current holding when fundamentals decline, full value is reached or there is a significant negative change in the company’s environmental/social/governance performance.

Performance represents past performance, which does not guarantee future results. Current performance may differ from figures shown. The fund’s investment return and principal value will change with market conditions, and you may have a gain or a loss when you sell your shares. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges. Please call Franklin Templeton at (800) DIAL BEN/(800) 342-5236 or visit franklintempleton.com for the most recent month-end performance.

Net Asset Value (NAV) returns are based on the NAV of the ETF, Market Price returns are based upon the official closing price of the ETF’s shares. Returns are average annualized total returns, except for those periods of less than one year, which are cumulative. Market Price returns are calculated using the closing price as of 1 p.m. Pacific time on each trading day (when NAV is normally determined for most funds), and do not represent the returns you would receive if you traded shares at other times. Since shares of the Fund did not trade in the secondary market until after the Fund’s inception, for the period from inception to the first day of secondary trading July 1, 2020, the NAV of the Fund is used as a proxy for the Market Price to calculate market returns.

The total annual operating expenses are as of the fund’s prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns.

Growth of $10,000

Inception through September 30, 2023

Market Price Returns, assuming dividends reinvested

The Growth of $10,000 chart reflects a hypothetical $10,000 investment on Market Price and assumes reinvestment of dividends and capital gains. Fund expense, including management fees and other expenses were deducted.

With a legacy dating back over 60 years, ClearBridge Investments is a leading global equity manager committed to delivering differentiated long-term results through authentic active management.

What should I know before investing?

All investments involve risks, including possible loss of principal. Equity securities are subject to price fluctuation and possible loss of principal. Small- and mid-cap stocks involve greater risks and volatility than large-cap stocks. Dividends may fluctuate and are not guaranteed, and a company may reduce or eliminate its dividend at any time. Depository receipts are subject to international investment risk and potentially negative effects from currency exchange rates, foreign taxation and differences in auditing and other financial standards. International investments are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets. The managers’ environmental, social and governance (ESG) strategies may limit the types and number of investments available and, as a result, may forgo favorable market opportunities or underperform strategies that are not subject to such criteria. There is no guarantee that the strategy’s ESG directives will be successful or will result in better performance. These and other risks are discussed in the fund’s prospectus.

Glossary

Standard Deviation: Measure of the degree to which a fund’s return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund’s performance will fluctuate from the average return. Beta: A measure of the fund’s volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market. The 30-day SEC yield is calculated using the net income (interest and dividends) per share earned over a trailing 30-day period (annualized), divided by the fund’s share price at the end of that period. It may not equal the fund’s actual income distribution rate, which reflects the fund’s past dividends paid to shareholders. Price to Book: The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. Price to Earnings (12-Month Trailing) is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds.

Important Information

ETFs trade like stocks, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns. ETF shares may be bought or sold throughout the day at their market price, not their Net Asset Value (NAV), on the exchange on which they are listed. Shares of ETFs are tradable on secondary markets and may trade either at a premium or a discount to their NAV on the secondary market.

Canada: While this content is intended only for Canadian institutional investors that qualify as “permitted clients” as defined in National Instrument 31-103 - Registration Requirements, Exemptions and Ongoing Registrant Obligations, U.S. securities laws generally limit a non-U.S. fund’s purchase of a U.S. registered mutual fund or ETF (a “U.S. Fund”) to no more than 3% of the U.S. Fund’s voting stock. You should consult your legal counsel prior to investing in a U.S. Fund.
