

Franklin U.S. Mid Cap Multifactor Index ETF (FLQM)

Multi-Factor | Factsheet as of June 30, 2025

Investment Overview

The fund seeks to provide investment results that closely correspond, before fees and expenses, to the performance of its corresponding underlying index, LibertyQ U.S. Mid Cap Equity Index. The underlying LibertyQ U.S. Mid Cap Equity Index generally includes U.S. mid capitalization companies that have favorable exposure to four investment style factors: quality, value, momentum and low volatility.

Total Returns (%)

	Cumulative			Average Annual				Inception	
	3-Mth	6-Mth	YTD	1-Yr	3-Yr	5-Yr	10-Yr	Inception	Date
Market Price Return	2.88	0.63	0.63	7.39	13.46	13.69	—	11.17	4/26/2017

Underlying Index	14.53	17.83	-12.62	28.94	15.73	28.56	-3.30	—	—	—

Performance data quoted represents past performance, which does not guarantee future results. Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expense or sales charges. Returns for periods of less than one year are not annualized. For current month-end performance, please visit franklintempleton.com.

Net Asset Value (NAV) returns are based on the NAV of the ETF; Market Price returns are based upon the official closing price of the ETF's shares. Returns are average annualized total returns, except for those periods of less than one year, which are cumulative. Market Price returns are calculated using the closing price as of 4 p.m. Eastern time on each trading day (when NAV is normally determined for most funds), and do not represent the returns you would receive if you traded shares at other times. Performance for the ETF and its benchmark index are as of the ETF's last trading day before the end of the period. Since shares of the Fund did not trade in the secondary market until after the Fund's inception, for the period from inception to the first day of secondary trading April 28, 2017, the NAV of the Fund is used as a proxy for the Market Price to calculate market returns.

The total annual operating expenses are as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns.

Growth of \$10,000

Inception through June 30, 2025

Market Price Returns, assuming dividends reinvested

The Growth of \$10,000 chart reflects a hypothetical \$10,000 investment on Market Price and assumes reinvestment of dividends and capital gains. Fund expense, including management fees and other expenses were deducted.

What should I know before investing?

All investments involve risks, including possible loss of principal. Equity securities are subject to price fluctuation and possible loss of principal. **Small- and mid-cap stocks** involve greater risks and volatility than large-cap stocks. There can be no assurance that the fund's **multi-factor stock selection** process will enhance performance. Exposure to such investment factors may detract from performance in some market environments, perhaps for extended periods. Performance of the fund may vary significantly from the performance of an **index**, as a result of transaction costs, expenses and other factors.

Derivative instruments can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. These and other risks are discussed in the fund's prospectus.

Glossary

Standard Deviation: Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return. **Beta:** A measure of the fund's volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market. The **30-day SEC yield** is calculated using the net income (interest and dividends) per share earned over a trailing 30-day period (annualized), divided by the fund's share price at the end of that period. It may not equal the fund's actual income distribution rate, which reflects the fund's past dividends paid to shareholders. **Weighted Average Market Capitalization:** A determination of a company's value, calculated by multiplying the total number of company stock shares outstanding by the price per share. For a portfolio, the value represents a weighted average based on the stocks held. **Price to Book:** The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Earnings (12-Month Trailing)** is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds.

Important Information

The LibertyQ U.S. Mid Cap Index methodology utilizes a custom factor weighting (50% Quality, 30% Value, 10% Momentum, 10% Low Volatility) and custom factor definitions. The methodology targets the top 25% of securities from the parent index with the highest combined factor score. **Quality** is measured by return on equity, gross profit over asset, 5 year gross margin sustainability (ex. Financials and REITs), Cash ROA and 5 year ROA sustainability (Financials and REITs). **Value** is measured by EBITDA to Enterprise Value Ratio (ex. REITs and Financials), 12-month forward price-to-earnings (ex. REITs and Financials), dividend yield (ex. REITs and Financials), 1/3 relative z-score of dividend yield and 2/3 relative z-scores of the price-to-book (REITs and Financials only). **Momentum** is measured by 6-month risk-adjusted price momentum and 12-month risk-adjusted price momentum. **Low Volatility** is measured by the historical beta of at least 104 weeks.

ETFs and ETPs trade like stocks, fluctuate in market value and may trade at prices above or below the ETFs/ETPs net asset value. Brokerage commissions and ETF expenses will reduce returns.

ETF/ETP shares may be bought or sold throughout the day at their market price, not their Net Asset Value (NAV), on the exchange on which they are listed. Shares of ETFs/ETPs are tradable on secondary markets and may trade either at a premium or a discount to their NAV on the secondary market.

Canada: This content is intended only for Canadian institutional investors that qualify as "permitted clients" as defined in National Instrument 31-103 - Registration Requirements, Exemptions and Ongoing Registrant Obligations. U.S. securities laws generally limit a non-U.S. fund's purchase of a U.S. registered mutual fund or ETF/ETP (a "U.S. Fund") to no more than 3% of the U.S. Fund's voting stock. You should consult your legal counsel prior to investing in a U.S. Fund.
