John Hancock Diversified Macro Fund	JDJIX	Global	14.0
Franklin K2 Alternative Strategies Fund	FABZX	Global	12.0
AltShares Merger Arbitrage ETF	ARB	Global	10.0
AlphaSimplex Managed Futures Strategy Fund	ASFYX	Global	8.0
Cash			**1.0**

Characteristics

Weighted Average Gross Expense Ratio (%)	1.15
Weighted Average Net Expense Ratio (%)	1.09
% Mutual Fund	54.00
% ETF	45.00
% Non-FT Funds	52.00
% ETF	45.00

Allocations are subject to change. Actual underlying fund allocations may vary over time as markets change. Cash allocation may vary based on platform requirements. **Weighted Avg Expense Ratio** is calculated as the percent allocated to the individual underlying fund/ETFs multiplied by each expense ratio stated in the current prospectus. Gross Expense Ratio reflects the total weighted average expense ratio before any fee waivers or reimbursements or applied to the underlying Fund or ETF strategies. May overstate actual investor costs if waivers are in place. Net Expense Ratio reflects the total weighted average expense ratio after applying any fee waivers or reimbursements. More accurate measure of what investors actually pay. Often lower than gross.

Not FDIC Insured | No Bank Guarantee | May Lose Value

The strategy returns shown are preliminary composite returns, subject to future revision (downward or upward).
YTD numbers and performance numbers less than one year are not annualized. Investors cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges. Past performance is not a guarantee of future results.

Fees: Periods less than one year are not annualized. Performance results are for the composite which includes all actual, fully discretionary accounts with substantially similar investment policies and objectives managed to the composite's investment strategy. Composite returns are stated in U.S. dollars and assume reinvestment of any dividends, interest income, capital gains, or other earnings. The composite may include account(s) that are gross of fees and pure gross of fees.

Pure" gross-of-fee returns do not reflect the deduction of any expenses, including transaction costs. A traditional (or "true") gross-of-fee return reflects performance after the reduction of transaction costs but before the reduction of the investment advisory fee. The gross-of-fee return may include a blend of "true" gross-of-fee returns for non-wrap accounts and "pure" gross-of-fee returns for wrap accounts. Net-of-fee returns is reduced by a model "wrap fee" (3.0% is the maximum anticipated wrap fee for equity and balanced portfolios) which includes trading expenses as well as investment management, administrative and custodial fees. The model wrap fee used represents the highest anticipated wrap fee applicable to the strategy. Actual fees and account minimums may vary.

For fee schedules, contact your financial professional, or if you enter into an agreement directly with Franklin Templeton Private Portfolio Group, LLC ("FTPPG"), refer to FTPPG's Form ADV Part 2A disclosure document. Management and performance of individual accounts may vary for reasons that include the existence of different implementation practices and model requirements in different investment programs.

BlackRock Event Driven Equity Fund	Contractual	06/30/2027
Franklin K2 Alternative Strategies Fund	Contractual	09/30/2026
John Hancock Diversified Macro Fund	Contractual	07/31/2027

Important Information

Model Portfolio Construction:

The Franklin Templeton Investment Solutions (FTIS) model portfolio construction process consists of an assessment of specific model parameters and goals, including allocation targets, volatility limits, income levels, and investable regions, as well as other objectives or constraints. Longer-term strategic asset allocation and shorter-term views provide an allocation framework for each model. Portfolio managers customize model allocations according to specific objectives including a wide range of targets for growth and income as well as risk expectations. Managers also consider fund recommendations from the FTIS manager research to find the right fit for each model. FTIS portfolio managers review models regularly, applying the team's latest views to each model.

While FTIS takes an active approach to fund selection by comparing the attractiveness of in-house funds with third-party managers to support potential alpha creation, the model portfolios focus on, and often consist largely of Franklin Templeton proprietary funds. As part of the portfolio construction analysis, portfolio managers consider several key factors when selecting underlying investments. The criteria used may include, but are not limited to: dealer platform constraints, underlying currencies, volatility ranges, the mix of active and passive strategies and/or an allocation mix of Franklin Templeton and third-party funds. Considerations like investment objectives, competitive rankings and positioning, expense ratio cap, historical risk and returns, are additional factors that may be used for final fund recommendations and allocations.

Potential Conflicts of Interest:

Franklin Templeton may not receive a fee for developing and updating these model portfolios, however, Franklin Templeton has a financial interest in the models as they include funds for which Franklin Templeton serves as investment advisor, and from which Franklin Templeton or its affiliates receives fees for investment management, shareholder servicing, and transfer agent services.

Suitability/Recommendations:

Any investment products or services named herein are for illustrative purposes only and should not be considered an offer to buy or sell, or an investment recommendation for any specific security, strategy or investment product or service.

There can be no assurance that any or all funds included in the models will be available for investment. An investment in any fund that appears in a model is subject to satisfaction of eligibility and applicable account opening requirements, for which Franklin Templeton takes no responsibility. The model portfolios described may not be appropriate for all investors or available for investment to all investors.

Neither Franklin Templeton nor its affiliates conducts investor suitability analysis regarding the models or their underlying investments. Suitability determination is the responsibility of the financial advisor or sponsor firm.

Additional Information:

The Franklin Templeton Model Portfolios are provided on a non-discretionary basis to sponsor firms and Financial Advisors on whose platform the models are available. It is the sponsor firm/Financial Advisor that has investment authority and discretion over accounts on their platform. The Franklin Templeton Model Portfolios are not available as investable products through Franklin Distributors, LLC.

The Model Portfolios may be offered with different share classes and/or placed on trading platforms that require changes such as an allocation to cash and a pro rata allocation of the remainder according to the Model Portfolio(s). These modifications will change reported specifics such as performance, estimated portfolio yield, etc. Refer to the materials and terms of the offering and/or platform for additional information.

The composition of the models may change without notice. Investment allocations may not achieve model objectives and actual underlying fund allocations may vary over time as markets change. Any periodic rebalancing or allocation changes to the models are initiated by and at the discretion of FTIS.

Please note that allocation changes to the underlying funds for some of the models may also be made at the discretion of the sponsor firm or Financial Advisor.

This communication is general in nature and should not be considered or relied upon as legal, tax or investment advice or an investment recommendation, or as a substitute for legal or tax counsel. Franklin Templeton does not provide legal or tax advice.

Risks of the Underlying Investments:

All investments involve risks, including possible loss of principal. These models include funds which engage in a variety of investment strategies involving certain risks. The model's risks are directly related to the risks of the underlying funds and may include, but is not limited to, the risks as described below. Model allocation strategies are not designed to maximize return or predict the highest performing fund or group of funds within each class in the model. There are expenses associated with the underlying funds in addition to any fees charged by the sponsor firm.

Equity securities are subject to price fluctuation and possible loss of principal.

Small- and mid-cap stocks involve greater risks and volatility than large-cap stocks.

Fixed income securities involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls.

Low-rated, high-yield bonds are subject to greater price volatility, illiquidity and possibility of default.

International investments are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets.

Derivative instruments can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance.

Short selling is a speculative strategy. Unlike the possible loss on a security that is purchased, there is no limit on the amount of loss on an appreciating security that is sold short.

Real estate investment trusts (REITs) are closely linked to the performance of the real estate markets. REITs are subject to illiquidity, credit and interest rate risks, and risks associated with small- and mid-cap investments.

Asset-backed, mortgage-backed or mortgage-related securities are subject to prepayment and extension risks.

The managers' **environmental social and governance (ESG) strategies** may limit the types and number of investments available and, as a result, may forgo favorable market opportunities or underperform strategies that are not subject to such criteria. There is no guarantee that the strategy's ESG directives will be successful or will result in better performance.

Diversification does not guarantee a profit or protect against a loss.

The **allocation** of assets among different strategies, asset classes and investments may not prove beneficial or produce the desired results.

Entities/Affiliates:

Investments are not FDIC-insured, nor are they deposits of or guaranteed by a bank or any other entity, so they may lose value.
