

Separately Managed Accounts | Fact Sheet as of December 31, 2025

Investment overview

The Putnam Sustainable Future SMA seeks to identify small- and mid-cap companies whose businesses benefit from solving sustainability challenges. Companies offering effective solutions can create growing businesses with strong financial returns.

Investment objective

The strategy seeks long-term capital appreciation.

Investment philosophy and process

We believe sustainability analysis is critical to unlocking alpha potential. Our process integrates relevant and forward-looking sustainability analysis into a high-quality fundamental research process, which can potentially lead to superior rates of return and mitigate risk for investors over the long term.

Solutions focus

Invests in companies whose products and services provide solutions to key sustainability challenges.

Active research process

Integrates relevant and forward-looking sustainability analysis with high-quality fundamental research to drive investment decisions.

Experienced team

Managed by dedicated and experienced sustainable investing team embedded within Putnam's equity research and quantitative/risk analysis groups.

Key differentiators

- Mid-cap-growth-oriented sustainable equity portfolio, diversified across sectors and key sustainability themes. Designed to serve as a core investment solution, providing differentiated sources of return relative to peers and its benchmark.
- A differentiated, inclusionary approach that looks for companies whose products and services provide solutions to essential sustainability challenges, offering the potential for strong growth and long-term financial performance.
- Dedicated investment team with deep fundamental experience plus deep sustainability experience, led since inception by Katherine Collins and Stephanie Dobson.

Management team

Putnam is a diversified equity-only asset manager serving investors worldwide. The firm has roots dating back to 1937, decades of experience in changing markets, and a tenured portfolio management team. Putnam offers a range of stock-driven portfolios that seeks to pursue consistent outperformance while managing downside risk.

Investment management team

Stephanie Dobson

Portfolio Manager

Industry since 2011

Rob Forker

Portfolio Manager

Industry since 2001

No assurance can be given that the investment objective will be achieved or that an investor will receive a return of all or part of their initial investment. Actual results could be materially different from the stated goals. As with any investment, there is a potential for profit as well as the possibility of loss. Use of models and analytical, quantitative and risk management tools and techniques is no guarantee of investment success or positive performance.

Investment process

STEP 1

Idea generation

- Utilize an inclusionary approach to identify investment candidates, no automatic exclusions
- Filter for appropriate capitalization and liquidity

STEP 2

Fundamental research

- Employ an integrated research process that focuses on three elements: sustainability, fundamentals, and valuation
- Conduct company-specific sustainability research to complement and extend the fundamental work of the core research team and that allows us to uncover opportunities before they have been fully appreciated by the market
- Embed materiality and forward-looking thematic research into the fundamental research process, as relevant sustainability issues will typically vary by sector, geography, asset class, and company

STEP 3

Risk management and portfolio construction

- Build a high-conviction, 50-80 stock portfolio, focused on delivering strong risk-adjusted returns primarily through stock-specific risk
- Aim for 3%-7% tracking error
- Focus on long-term performance

The investment process may change over time. The characteristics set forth above are intended as a general illustration of some of the criteria the strategy team considers in selecting securities for client portfolios. There is no guarantee that investment objectives will be achieved.

Please visit www.franklintempleton.com for the latest performance figures.

Periods less than one year are not annualized. Performance results are for the composite which includes all actual, fully discretionary accounts with substantially similar investment policies and objectives managed to the composite's investment strategy. Composite returns are stated in U.S. dollars and assume reinvestment of any dividends, interest income, capital gains, or other earnings. The composite may include account(s) that are gross of fees and pure gross of fees. "Pure" gross-of-fee returns do not reflect the deduction of any expenses, including transaction costs. A traditional (or "true") gross-of-fee return reflects performance after the reduction of transaction costs but before the reduction of the investment advisory fee. The gross-of-fee return may include a blend of "true" gross-of-fee returns for non-wrap accounts and "pure" gross-of-fee returns for wrap accounts. Net-of-fee returns are reduced by a model "wrap fee" (3.0% is the maximum anticipated wrap fee for equity and balanced portfolios) which includes trading expenses as well as investment management, administrative and custodial fees. The model wrap fee used represents the highest anticipated wrap fee applicable to the strategy. Actual fees and account minimums may vary.

Past performance is not a guarantee of future results. *For illustrative purposes only. Assumes no withdrawals or contributions. These statistics are based on gross and net-of-fees quarterly composite returns, were calculated assuming reinvestment of dividends and income, and take into account both realized and unrealized capital gains and losses.

Periods less than one year are not annualized. Performance results are for the composite which includes all actual, fully discretionary accounts with substantially similar investment policies and objectives managed to the composite's investment strategy. Composite returns are stated in U.S. dollars and assume reinvestment of any dividends, interest income, capital gains, or other earnings. The composite may include account(s) that are gross of fees and pure gross of fees. "Pure" gross-of-fee returns do not reflect the deduction of any expenses, including transaction costs. A traditional (or "true") gross-of-fee return reflects performance after the reduction of transaction costs but before the reduction of the investment advisory fee. The gross-of-fee return may include a blend of "true" gross-of-fee returns for non-wrap accounts and "pure" gross-of-fee returns for wrap accounts. Net-of-fee returns are reduced by a model "wrap fee" (3.0% is the maximum anticipated wrap fee for equity and balanced portfolios) which includes trading expenses as well as investment management, administrative and custodial fees. The model wrap fee used represents the highest anticipated wrap fee applicable to the strategy. Actual fees and account minimums may vary.

Terms and definitions:

Dividend yield is determined by dividing a stock's annual dividends per share by the current market price per share. Dividend yield is a financial ratio that shows how much a company pays out in dividends. **Dividend yield is calculated without the deduction of fees and expenses.**

P/E (Year 1) is the previous day's closing price of the stock divided by the consensus earnings per share (EPS) of fiscal year 1 (FY1) provided by I/B/E/S. Forecasts are inherently limited and should not be relied upon as indicators of future performance.

The **price-to-book ratio (P/B)** is a stock's price divided by the stock's per share book value. Earnings per share (EPS) is the portion of a company's profit allocated to each outstanding share of a common stock.

Weighted median market capitalization represents the value at which half the portfolio's market capitalization weight falls above, and half falls below.

Weighted average market capitalization represents the average value of the companies held in the portfolio. When that figure is weighted, the impact of each company's capitalization on the overall average is proportional to the total market value of its shares.

Market capitalization measures the number of outstanding common shares of a given corporation multiplied by the latest price per share.

Standard deviation measures the risk or volatility of an investment's return over a particular time period; the greater the number, the greater the risk.

The **up-capture ratio** measures the manager's overall performance to the benchmark's overall performance, considering only quarters that are positive in the benchmark. An up-capture ratio of more than 100 indicates a manager who outperforms the relative benchmark in the benchmark's positive quarters.

The **down-capture ratio** is the ratio of the manager's overall performance to the benchmark's overall performance, considering only quarters that are negative in the benchmark. A down-capture ratio of less than 100 indicates a manager who outperforms the relative benchmark in the benchmark's negative quarters and protects more of a portfolio's value during down markets.

Alpha is a measure of performance vs. a benchmark on a risk-adjusted basis. A positive alpha of 1.0 means the portfolio has outperformed its benchmark index by 1%. Correspondingly, a similar negative alpha would indicate an underperformance of 1%. Alpha is a measure of the difference between actual returns and expected performance measuring sensitivity to index movements.

Beta measures the sensitivity of an investment to the movement of its benchmark. A beta higher than 1.0 indicates the investment has been more volatile than the benchmark and a beta of less than 1.0 indicates that the investment has been less volatile than the benchmark.

Sharpe ratio is a risk-adjusted measure, calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better a portfolio's historical risk-adjusted performance.

R-squared measures the strength of the linear relationship between a portfolio and its benchmark. R-squared at 1.00 implies perfect linear relationship and zero implies no relationship exists.

The **Russell Midcap Growth Index** measures the performance of the mid-cap growth segment of the U.S. equity universe. Source: FTSE.

What are the risks?

All investments involve risks, including possible loss of principal. The investment style may become out of favor, which may have a negative impact on performance.

Small- and mid-cap stocks involve greater risks and volatility than large-cap stocks. To the extent the portfolio invests in a **concentration of certain securities, regions or industries**, it is subject to increased volatility. International investments are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in **emerging markets**. The managers' **environmental, social and governance (ESG) strategies** may limit the types and number of investments available and, as a result, may forgo favorable market opportunities or underperform strategies that are not subject to such criteria. There is no guarantee that the strategy's ESG directives will be successful or will result in better performance.
