

Separately Managed Account

Franklin Templeton Balanced Income Portfolios

3Q 2025

Separately Managed Accounts (SMAs) are investment services provided by Franklin Templeton Private Portfolio Group, LLC ("FTPPG"), a federally registered investment advisor. Client portfolios are managed based on investment instructions or advice provided by one or more of the following Franklin Templeton affiliated subadvisors: ClearBridge Investments, LLC, and Western Asset Management Company, LLC. Management is implemented by FTPPG, the designated subadvisor or, in the case of certain programs, the program sponsor or its designee.

These materials are being provided for illustrative and informational purposes only. The information contained herein is obtained from multiple sources that are believed to be reliable. However, such information has not been verified, and may be different from the information included in documents and materials created by the sponsor firm in whose investment program a client participates. Some sponsor firms may require that these materials be preceded or accompanied by investment profiles or other documents, or materials prepared by such sponsor firms, which will be provided upon a client's request. For additional information, documents and/or materials, please speak to your financial professional or contact your sponsor firm.

Franklin Templeton Balanced Income Portfolios

Overview

Franklin Templeton Balanced Income Portfolios pursue an objective of long-term growth and high current income through a combination of asset allocation and fundamental security analysis. ClearBridge Investments determines the portfolio's allocations among equities, fixed income securities and cash equivalents and also selects equity investments for the portfolios. Fixed income investments are managed on the basis of investment instructions furnished by Western Asset.

Objectives

Seeks to:

- Provide a high level of current income by investing in high-quality, undervalued companies and select fixed income instruments.
- Achieve long-term capital growth.
- Outperform a 70/30 blend of the Russell 1000 Value Index and the Bloomberg U.S. Intermediate Treasury Bond Index.

Philosophy

We believe that:

- A combination of steady income and conservative capital growth may be achieved in a single portfolio.
- Blending top-down macroeconomic research with bottom-up fundamental analysis may enhance the portfolio's overall return.

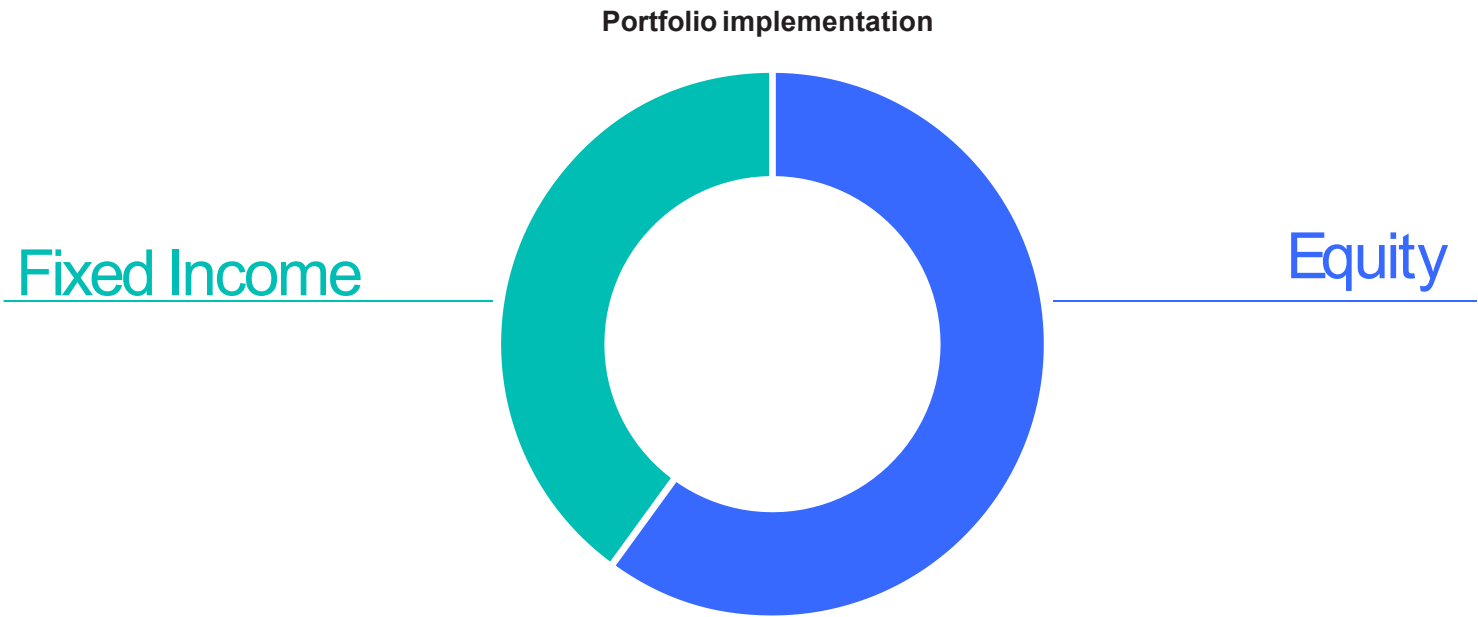

Asset allocation

Diversify across equity, fixed income and cash allocations.

What are the risks?

All investments involve risks, including possible loss of principal. **Small- and mid-cap stocks** involve greater risks and volatility than large-cap stocks. **Fixed income securities** involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls. **Liquidity risk** exists when securities or other investments become more difficult to sell, or are unable to be sold, at the price at which they have been valued. The **allocation** of assets among different strategies, asset classes and investments may not prove beneficial or produce the desired results.

Franklin Templeton Balanced Income Portfolios investment process

Portfolio Implementation Balanced Income Portfolios

- Diversify across equity, fixed income and cash allocations.
- Active equity sector rotation includes exposure to higher-yielding stocks.
- The managers may sometimes hold significant cash reserves as a portion of the portfolio while waiting for buying opportunities.

An account's actual allocations to its equity and fixed income segments will vary over time as markets change. An account will be rebalanced to its target allocation in the event that the account's allocations to its equity and fixed income segments drift 10% or more from their target allocations. An account generally will not be rebalanced unless such 10% drift threshold is reached. However, cash flows into and out of an account will be applied towards the account's more underweight segment in order to bring such account's allocations back towards their target allocations. Yields and dividends represent past performance and there is no guarantee they will continue to be paid.

For Illustrative Purposes Only. Asset allocations are approximate and subject to change.

The investment process may change over time. The characteristics set forth are intended as a general illustration of some of the criteria the strategy team considers in selecting securities for client portfolios. There is no guarantee investment objectives will be achieved.

Franklin Templeton Balanced Income Portfolios

Equity investment process

STEP 1

Define the investment universe

Consider common stocks, convertible and non-convertible preferred stocks, convertible bonds, ADRs, real estate investment trusts (REITs), U.S. Treasuries, U.S. Government agency securities, and, to a limited extent, ETFs.

STEP 2

Evaluate stocks using proprietary discipline

Perform top-down macroeconomic research to drive sector weightings and emphasize industry themes and trends.

STEP 3

Base selection on fundamental security analysis and stress a current income and long-term value orientation

- Equity and equity-related investments may include common stocks, preferred stocks, convertible bonds, ETFs, ADRs and REITs. Focus on companies with healthy balance sheets selling at or near book value and at prices that do not accurately reflect cash flows, tangible assets, or management skills.
- Fixed income investments may include U.S. Treasuries and U.S. Government agency securities. Fixed-income investments have an average maturity of 10 years or less.

STEP 4

Fundamental Analysis

- Re-examine when technicals/fundamentals deteriorate, full growth potential is reached, material insider buying/selling is apparent or to capitalize on temporary bond mispricing.
- Adeptly assesses market conditions and at times hold significant amounts of cash reserves as a portion of the portfolio while waiting for buying opportunities.

The investment process may change over time. The characteristics set forth are intended as a general illustration of some of the criteria the strategy team considers in selecting securities for client portfolios. There is no guarantee investment objectives will be achieved.

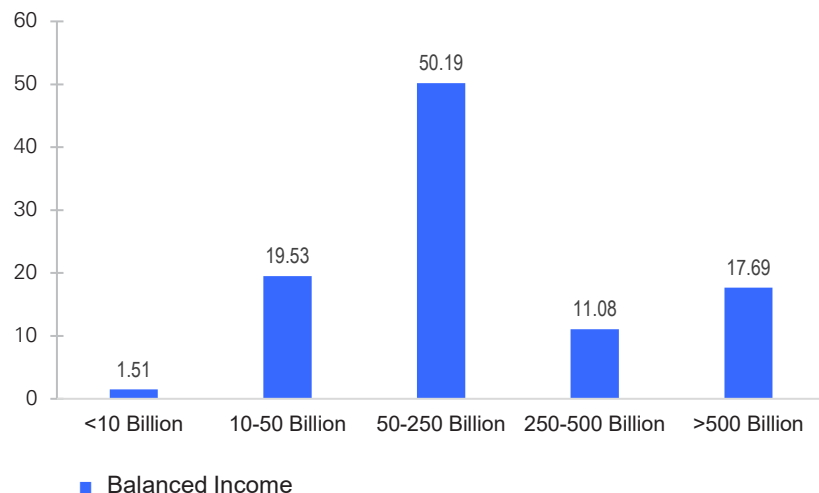

Investments may include ETFs representing U.S. securities markets, industry and market capitalization sectors, non-U.S. country and regional markets, and other types of non-U.S. markets and sectors. In addition, a client will bear a proportionate share of the separate fees and expensed incurred by any ETF in which the clients' account is invested.

The **Index Mix** consists of the following: 70% Russell 1000 Value and 30% Bloomberg Intermediate Treasury Bond Index.

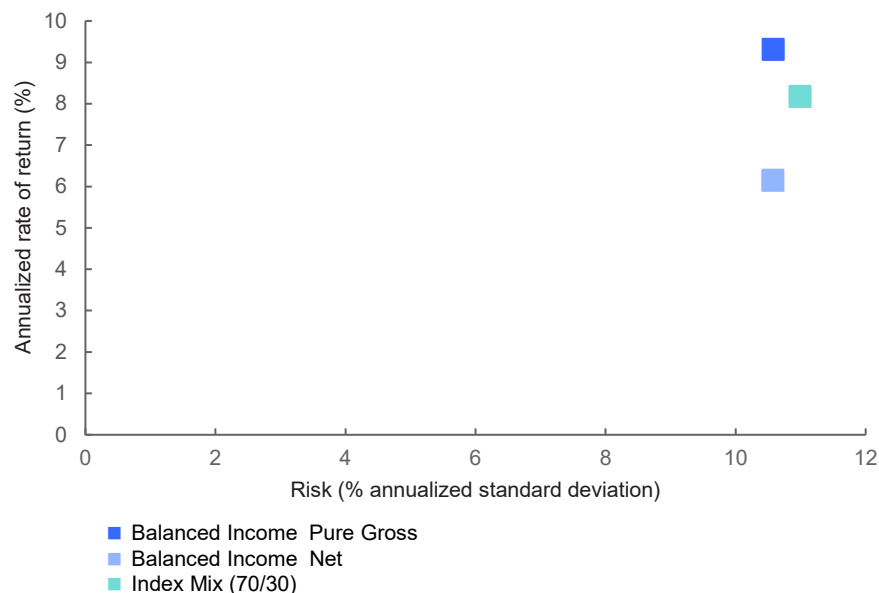

Periods less than one year are not annualized. Performance results are for the composite which includes all actual, fully discretionary accounts with substantially similar investment policies and objectives managed to the composite's investment strategy. Composite returns are stated in U.S. dollars and assume reinvestment of any dividends, interest income, capital gains, or other earnings. The composite may include account(s) that are gross of fees and pure gross of fees. "Pure" gross-of-fee returns do not reflect the deduction of any expenses, including transaction costs. A traditional (or "true") gross-of-fee return reflects performance after the reduction of transaction costs but before the reduction of the investment advisory fee. The gross-of-fee return may include a blend of "true" gross-of-fee returns for non-wrap accounts and "pure" gross-of-fee returns for wrap accounts. Net-of-fee returns are reduced by a model "wrap fee" (3.0% is the maximum anticipated wrap fee for equity and balanced portfolios) which includes trading expenses as well as investment management, administrative and custodial fees. The model wrap fee used represents the highest anticipated wrap fee applicable to the strategy. Actual fees and account minimums may vary.

For fee schedules, contact your financial professional, or if you enter into an agreement directly with Franklin Templeton Private Portfolio Group, LLC ("FTPPG"), refer to FTPPG's Form ADV Part 2A disclosure document. Management and performance of individual accounts may vary for reasons that include the existence of different implementation practices and model requirements in different investment programs. Past performance is not a guarantee of future results. Please see appendix for GIPS® Report and term definitions.

Compliance Statement:

Franklin Templeton Private Portfolio Group, LLC ("FTPPG") claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. FTPPG has been independently verified for the periods January 1, 2013 - December 31, 2024. The verification report(s) is/are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedure for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

Firm Information:

Franklin Templeton Private Portfolio Group, LLC ("FTPPG"), formerly known as Legg Mason Private Portfolio Group, LLC ("LMPPG"), is a wholly owned indirect subsidiary of Franklin Resources, Inc. ("Franklin"). In July 2020 Legg Mason, Inc., its parent company, was purchased by Franklin. FTPPG has used Subadvisers for all periods presented. FTPPG, together with its Subadvisers, provides investment advisory services primarily in investment programs sponsored by Sponsor Firms. The investment advisory services FTPPG and the Subadvisers provide differ depending on the type of Sponsor Firm investment program in which a client participates.

Composite Information:

The Franklin Templeton Balanced Income 70/30 composite consists of discretionary wrap accounts with an account minimum of US \$25,000. The strategy seeks an objective of long-term growth and high current income through a combination of asset allocation and fundamental security analysis. The main risks of this strategy are General Investment Risk, Small Cap Risk, Mid Cap Risk, Illiquidity Risk, Credit Risk, Interest Rate Risk and Asset Allocation Risk.

Input and Calculation Data:

The fee schedule currently in effect is 3.00% on all assets. Net of fee composite returns are calculated by reducing each monthly composite pure gross rate of return by the highest "bundled" fee charged (3.00%) annually, prorated to a monthly ratio. The "bundled" fee includes transaction costs, investment management, custodial, and other administrative fees. The internal dispersion of annual returns is measured by the asset-weighted standard deviation of portfolio returns included in the composite for the entire year. Gross returns are used to calculate presented risk measures. The composite employs a 10% significant cash flow policy which started in January 2021. A list of composite and limited distribution pooled fund descriptions and a list of broad distribution pooled funds is available upon request. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. Past performance is not necessarily indicative of future results. GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Primary Benchmark Information:

The composite uses a custom blended benchmark consisting of 70% Russell 1000® Value / 30% Bloomberg US Intermediate Treasury which is calculated by weighting the respective index returns monthly.

Earnings before interest, taxes, depreciation and amortization (EBITDA) approximates a firm's operating cash flow by considering its earnings before interest, taxes, depreciation and amortization.

Free Cash Flow measures the cash remaining after accounting for a firm's cash expenditures to support its operations and maintain its capital assets.

Market Capitalization measures the number of outstanding common shares of a given corporation multiplied by the latest price per share.

Weighted Median Market Capitalization represents the value at which half the portfolio's market capitalization weight falls above, and half falls below.

Weighted Average Market Capitalization represents the average value of the companies held in the portfolio. When that figure is weighted, the impact of each company's capitalization on the overall average is proportional to the total market value of its shares.

Dividend Yield is determined by dividing a stock's annual dividends per share by the current market price per share. Dividend yield is a financial ratio that shows how much a company pays out in dividends. **Dividend Yield is calculated without the deduction of fees and expenses.**

P/E (Year 1) is the previous day's closing price of the stock divided by the consensus earnings per share (EPS) of fiscal year 1 (FY1) provided by I/B/E/S. Forecasts are inherently limited and should not be relied upon as indicators of future performance.

The **Price-to-Book** ratio (P/B) is a stock's price divided by the stock's per share book value.

Earnings Per Share (EPS) is the portion of a company's profit allocated to each outstanding share of a common stock.

The **Sharpe Ratio** is a risk-adjusted measure, calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the portfolio's historical adjusted performance.

Alpha is a measure of the difference between actual returns and expected performance, given the level of risk as measured by Beta, where **Beta** measures sensitivity to benchmark movements.

R-Squared measures the strength of the linear relationship between the portfolio and its benchmark. R-squared at 1.0 implies perfect linear relationship and zero implies no relationship exists.

Standard Deviation is based on quarterly data. Standard deviation is a measure of the variability of returns; the higher the standard deviation, the greater the range of performance (i.e., volatility).

The **Capture Ratios** measure a manager's composite performance relative to the benchmark, considering only those quarters that are either positive (Up) or negative (Down) for the benchmark.

An **Up Market Capture Ratio** greater than 1.0 indicates a manager who has outperformed the benchmark in the benchmark's positive quarters.

A **Down Market Capture Ratio** of less than 1.0 indicates a manager who has outperformed the relative benchmark in the benchmark's negative quarters.

The **Citi 3-Month T-Bill Index** is an unmanaged index of three-month Treasury bills. The index consists of an average of the last three-month U.S. Treasury bill issues.

The **Bloomberg Government Bond 1-3 Year Index** is an index that measures the performance of all public U.S. government obligations with remaining maturities of approximately 1-3 years. Source: Bloomberg Indices.

The **Bloomberg 1-15 Year Blend (1-17) Municipal Bond Index** consists of a broad selection of investment-grade general obligation and revenue bonds of maturities from 1 to 17 years. Source: Bloomberg Indices.

The **Bloomberg Intermediate U.S. Government/Credit Index** is an unmanaged index that measures the performance of intermediate (one to ten years) government and corporate fixed-rate debt issues. Source: Bloomberg Indices.

The **Bloomberg Municipal 1 Year Index** is an unmanaged Index of municipal bonds with a remaining maturity of one to two years. Source: Bloomberg Indices.

The **Bloomberg Municipal 5 Year Index** is an unmanaged index that tracks USD-denominated long-term, tax-exempt bond market with maturities of 4-6 years, including state and local general obligation bonds, revenue bonds, insured bonds, and pre-refunded bonds. Source: Bloomberg Indices.

The **Bloomberg Municipal Bond Index** is a broad measure of the municipal bond market with maturities of at least one year. Source: Bloomberg Indices.

The **Bloomberg Municipal Managed Money Short Intermediate Index** measures the performance of the publicly traded municipal bonds that cover the USD-denominated short/intermediate term tax-exempt bond market, including state and local general obligation bonds, revenue bonds, insured bonds, and pre-refunded bonds. Source: Bloomberg Indices.

The **Bloomberg U.S. Aggregate Index** is comprised of investment-grade, U.S. dollar-denominated government, corporate, and mortgage- and asset-backed issues having at least one year to maturity. Source: Bloomberg Indices.

The **Bloomberg U.S. Government 1-5 Year Index** measures the performance of US dollar denominated, fixed-rate, nominal U.S. Treasuries and U.S. agency debentures with maturities greater or equal than 1 year but less than 5 years. Source: Bloomberg Indices.

The **Bloomberg U.S. Government/Credit Bond Index** is an index that tracks the performance of U.S. government and corporate bonds rated investment grade or better, with maturities of at least one year. Source: Bloomberg Indices.

The **Bloomberg U.S. High Yield Very Liquid Index (VLI)** is a component of the US Corporate High Yield Index designed to track a more liquid component of the U.S. dollar-denominated, high-yield, fixed-rate corporate bond market. Source: Bloomberg Indices.

The **Bloomberg U.S. Intermediate Corporate Index** measures the performance of investment grade, fixed-rate, US dollar-denominated taxable corporate securities with maturities of 1-10 years. Source: Bloomberg Indices.

The **Bloomberg U.S. Intermediate Treasury Index** measures the performance of the U.S. Treasury debentures with maturities of 1-10 years. Source: Bloomberg Indices.

The **ICE BofA 1-3 Year Treasury Index** is a market-capitalization-weighted index including all U.S. Treasury notes and bonds with maturities greater than or equal to one year and less than three years. Source: The index data referenced herein is the property of Intercontinental Exchange ("ICE") and/or its licensors and has been licensed for use by Franklin Templeton. ICE and its licensors accept no liability in connection with this use.

Term Definitions

Maturity is the date at which a debt instrument is due and payable. A bond due to mature on January 1, 2025, will return the bondholder's principal and final interest payment when it reaches maturity on that date. Bond yields are frequently calculated on a yield-to-maturity basis.

Duration (Modified Duration) is the measure of the price sensitivity of a fixed income security to an interest rate change of 100 basis points. Calculation is based on the weighted average of the present values for all cash flows.

Yield to Worst (YTW) is based on a portfolio's current holdings on one specific day, is gross of all portfolio expenses, and is calculated based on assumptions that prepayment occurs if the bond has called or put provisions, and the issuer can offer a lower coupon rate based on current market rates. If market rates are higher than the current yield of a bond, the YTW calculation will assume no prepayments are made, and YTW will equal the yield to maturity. The YTW will be the lowest of yield to maturity or yield to call (if the bond has prepayment provisions). The YTW of a bond portfolio is the market-weighted average of the YTWs of all the bonds in the portfolio. **Yield to Worst is calculated without the deduction of fees and expenses.**

Insured municipal bonds are ones where scheduled interest and principal payments are guaranteed by AAA-rated municipal bond insurers.

General Obligation municipal bonds are backed by the credit and taxing power of the issuing jurisdiction rather than the revenue of a given project.

Revenue bonds are municipal bonds supported by the revenue from a specific project.

Pre-refunded bonds are municipal bonds that are generally backed or secured by U.S. Treasury bonds.

Effective Duration is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change.

Average Maturity is the average length of maturity for all fixed-rate debt instruments held in a portfolio.

Average Coupon based on the portfolio's underlying holdings, which may differ and are subject to change. Coupon rate is the annual coupon payments paid by the issuer relative to a bond's face or par value. **Average Coupon is calculated without the deduction of fees and expenses.**

Yield to Maturity - The rate of return anticipated on a bond if it is held until the maturity date. The calculation of YTM takes into account the current market price, par value, coupon interest rate and time to maturity. **Yield to Maturity is calculated without the deduction of fees and expenses.**

Weighted Average Life - An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings.

The **Sharpe Ratio** is a risk-adjusted measure that is calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the portfolio's historical adjusted performance.

Alpha is a measure of the difference between actual returns and expected performance, given the level of risk as measured by **Beta**, where Beta measures sensitivity to benchmark movements.

R-Squared measures the strength of the linear relationship between the portfolio and its benchmark. R-squared at 1.0 implies perfect linear relationship and zero implies no relationship exists.

Standard Deviation is a measure of the variability of returns; the higher the standard deviation, the greater the range of performance (i.e., volatility).

The **Capture Ratios** measure a manager's composite performance relative to the benchmark, considering only those months that are either positive (Up) or negative (Down) for the benchmark.

An **Up-Market Capture Ratio** greater than 1.0 indicates a manager who has outperformed the benchmark in the benchmark's positive months.

A **Down-Market Capture Ratio** of less than 1.0 indicates a manager who has outperformed the relative benchmark in the benchmark's negative months.
