

# Franklin Multisector Income ETF (MULT)

## Multi-Sector | Factsheet as of September 30, 2025

### **Investment Overview**

The fund seeks to maximize current income and has a secondary goal of capital appreciation over the long term. The investment manager allocates the portfolio opportunistically across a diverse range of fixed income sectors, including bonds, government and agency securities, corporate loans, and mortgage-backed securities.

## **Total Returns (%)**

	Cumulative			Average Annual					Inception
	3-Mth	6-Mth	YTD	1-Yr	3-Yr	5-Yr	10-Yr	Inception	Date
Market Price Return	_	-	-	-	_	_	_	0.48	8/26/2025
NAV Returns	_	_	_	_	_	_	_	1.04	8/26/2025
Benchmark	_	_	_	_	_	_	_	1.20	_

### **Calendar Year Total Returns (%)**

	2024	2023	2022	2021	2020	2019	2018	2017	2016	2015
Market Price Return	_	_	_	_	_	_	_	_	_	
NAV Returns	_	_	_	_	_	_	_	_	_	_
Benchmark	-	-	-	-	-	-	-	-	-	_

Performance data quoted represents past performance, which does not guarantee future results. Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expense or sales charges. Returns for periods of less than one year are not annualized. For current month-end performance, please visit franklintempleton.com.

Net Asset Value (NAV) returns are based on the NAV of the ETF; Market Price returns are based upon the official closing price of the ETF's shares. Returns are average annualized total returns, except for those periods of less than one year, which are cumulative. Market Price returns are calculated using the closing price as of 4 p.m. Eastern time on each trading day (when NAV is normally determined for most funds), and do not represent the returns you would receive if you traded shares at other times. Performance for the ETF and its benchmark index are as of the ETF's last trading day before the end of the period. Since shares of the Fund did not trade in the secondary market until after the Fund's inception, for the period from inception to the first day of secondary trading August 28, 2025 the NAV of the Fund is used as a proxy for the Market Price to calculate market returns.

The total annual operating expenses are as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns.

### Growth of \$10,000

Inception through September 30, 2025

Market Price Returns, assuming dividends reinvested

The Growth of \$10,000 chart reflects a hypothetical \$10,000 investment on Market Price and assumes reinvestment of dividends and capital gains. Fund expense, including management fees and other expenses were deducted.

#### **Portfolio Data Information**

**Exposure:** Notional exposure figures are estimated and are intended to show the portfolio's direct exposure to securities and indirect exposure, through derivatives. Direct and indirect exposures are subject to change over time and methodologies for calculating indirect exposures vary by derivative type. Portfolio breakdown percentages may not total 100% and may be negative due to rounding, use of derivatives, unsettled trades or other factors.

Credit Quality is a measure of a bond issuer's ability to repay interest and principal in a timely manner. The credit ratings shown are based on each portfolio security's rating as provided by Standard and Poor's, Moody's Investors Service and/or Fitch Ratings, Ltd. and typically range from AAA (highest) to D (lowest), or an equivalent and/or similar rating. For this purpose, the manager assigns each security the middle rating from these three agencies. When only two agencies provide ratings, the lower of the two ratings will be assigned. When only one agency assigns a rating, that rating will be used. Foreign government bonds without a specific rating are assigned a country rating, if available. Securities that are unrated by all three agencies are reflected as such. The credit quality of the investments in the Fund's portfolio does not apply to the stability or safety of the Fund. These ratings are updated monthly and may change over time. Please note, the Fund itself has not been rated by an independent rating agency.

## **Portfolio Management**

## What should I know before investing?

All investments involve risks, including possible loss of principal. Fixed income securities involve interest rate, credit, inflation and reinvestment risks, and possible loss of principal. As interest rates rise, the value of fixed income securities falls. Low-rated, high-yield bonds are subject to greater price volatility, illiquidity and possibility of default. Derivative instruments can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. Asset-backed, mortgage-backed or mortgage-related securities are subject to prepayment and extension risks. International investments are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets. To the extent the portfolio invests in a concentration of certain securities, regions or industries, it is subject to increased volatility. Derivative instruments can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. Floating-rate loans and debt securities are typically rated below investment grade and are subject to greater risk of default, which could result in loss of principal. The manager may consider environmental, social and governance (ESG) criteria in the research or investment process; however, ESG considerations may not be a determinative factor in security selection. In addition, the manager may not assess every investment for ESG criteria, and not every ESG factor may be identified or evaluated. These and other risks are discussed in the fund's prospectus. The fund is newly organized, with a limited history of operations. When the fund's size is small, the fund may experience low trading volume and wide bid/ask spreads. These and other risks are discussed in the fund's prospectus.

### **Glossary**

Weighted Average Maturity: An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings. Effective Duration is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes.

#### **Important Information**

ETFs and ETPs trade like stocks, fluctuate in market value and may trade at prices above or below the ETFs/ETPs net asset value. Brokerage commissions and ETF expenses will reduce returns.

ETF/ETP shares may be bought or sold throughout the day at their market price, not their Net Asset Value (NAV), on the exchange on which they are listed. Shares of ETFs/ETPs are tradable on secondary markets and may trade either at a premium or a discount to their NAV on the secondary market.

Canada: This content is intended only for Canadian institutional investors that qualify as "permitted clients" as defined in National Instrument 31-103 - Registration Requirements, Exemptions and Ongoing Registrant Obligations. U.S. securities laws generally limit a non-U.S. fund's purchase of a U.S. registered mutual fund or ETF/ETP (a "U.S. Fund") to no more than 3% of the U.S. Fund's voting stock. You should consult your legal counsel prior to investing in a U.S. Fund.
