

Templeton Global ADR Equity SMA

Separately Managed Accounts | Fact Sheet as of December 31, 2023

Investment overview

The Templeton Global ADR Equity invests in global stocks with a market capitalization generally of \$1 billion or greater at time of purchase. Industry weights are limited to approximately 20% of the total portfolio, and emerging markets typically range from 5% to 15%, with approximately 30% maximum. Accounts may invest in foreign securities only through American Depositary Receipts (ADRs).

Investment management team

Heather Waddell, CFA
Portfolio Manager
Industry since 1995

Matthew Nagle, CFA
Portfolio Manager
Industry since 1999

Peter Nori, CFA
Portfolio Manager
Industry since 1987

Investment philosophy

Compound value:

- We believe a forward-looking and price-disciplined approach to investing that focuses on company fundamentals as the driver of value creation have the potential to generate superior returns for clients over the long term.
- Compound value is a broad interpretation of value that balances forward-looking and price discipline.

Forward-looking

- Willing to predict change

Price-disciplined

- Drives risk and return

Independent-minded

- Contrarian when warranted

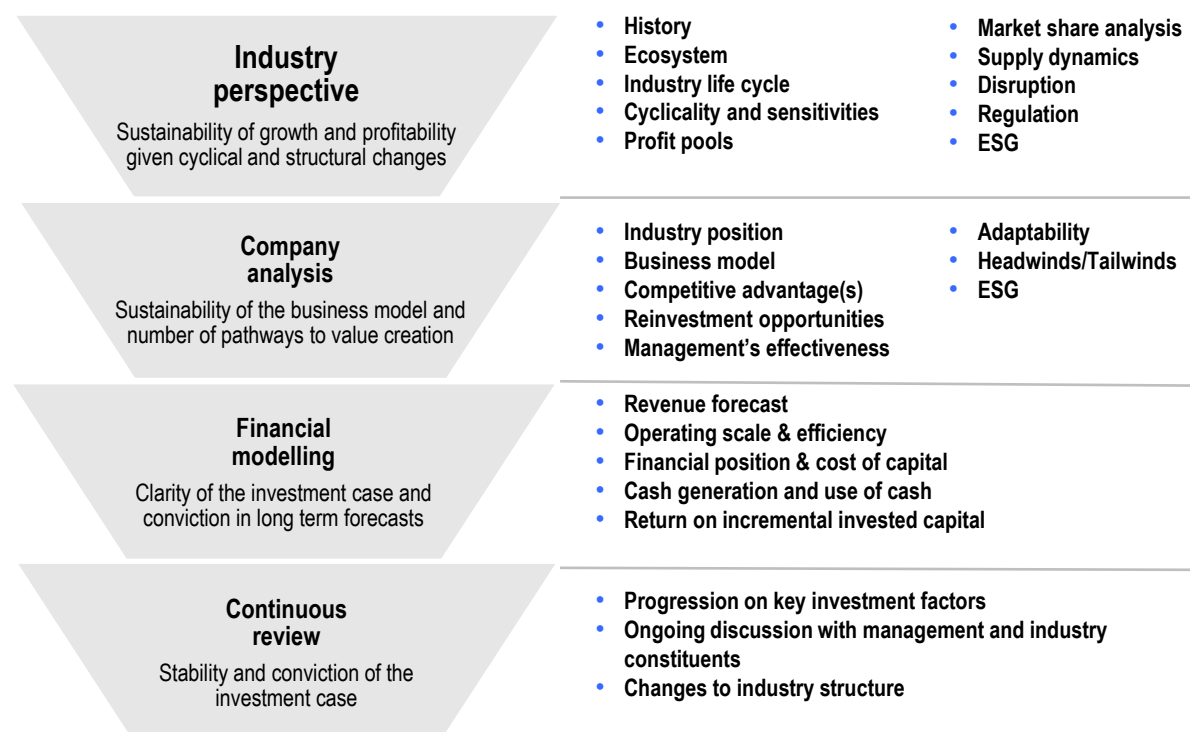

Fundamental

- Return on invested capital drives value

Long-term

- Allow time for value to emerge

Investment process

The investment process may change over time. The characteristics set forth above are intended as a general illustration of some of the criteria the strategy team considers in selecting securities for client portfolios. There is no guarantee that investment objectives will be achieved.

† Source: Franklin Templeton. Portfolio characteristics are based on a model portfolio, not an actual client account. The model portfolio is a hypothetical portfolio whereby the portfolio characteristics are based on simulated trading and account activity of a client account invested in this strategy. The model portfolio assumes no withdrawals, contributions, or client-imposed restrictions. Portfolio characteristics of individual client accounts may differ from those of the model portfolio as a result of account size, client-imposed restrictions, the timing of client investments, market conditions, contributions, withdrawals and other factors.

The strategy returns shown are preliminary composite returns, subject to future revision (downward or upward). Please visit www.franklintempleton.com for the latest performance figures. Investors cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges.

¹ **Fees:** Returns for periods less than one year are not annualized. Pure gross of fee returns do not reflect the deduction of any expenses, including transaction costs. Net performance includes the deduction of a 3.0% annual wrap fee, which is the maximum anticipated wrap fee for equity and balanced strategies and 1.5% for fixed income strategies. Actual fees vary. For fee schedules, contact your financial professional, or if you enter into an agreement directly with Franklin Templeton Private Portfolio Group, LLC (FTPPG), refer to FTPPG's Form disclosure document. Returns reflect the reinvestment of dividends and other earnings. All performance is reported in US dollars.

Past performance is not a guarantee of future results. To obtain specific information on available products and services or a GIPS® Report, contact your Franklin Templeton separately managed account sales team at (800) DIAL BEN/342-5236. * For illustrative purposes only. Assumes no withdrawals or contributions. These statistics are based on pure gross and net-of-fees quarterly composite returns, were calculated assuming reinvestment of dividends and income, and take into account both realized and unrealized capital gains and losses. Pure gross of fee returns do not reflect the deduction of any expenses, including transaction costs. Net performance includes the deduction of a 3.0% annual wrap fee, which is the maximum anticipated wrap fee for equity and balanced portfolios.

Terms and definitions:

Dividend yield is determined by dividing a stock's annual dividends per share by the current market price per share. Dividend yield is a financial ratio that shows how much a company pays out in dividends.

P/E (Year 1) is the previous day's closing price of the stock divided by the consensus earnings per share (EPS) of fiscal year 1 (FY1) provided by I/B/E/S. Forecasts are inherently limited and should not be relied upon as indicators of future performance.

The **price-to-book ratio (P/B)** is a stock's price divided by the stock's per share book value. Earnings per share (EPS) is the portion of a company's profit allocated to each outstanding share of a common stock.

Weighted median market capitalization represents the value at which half the portfolio's market capitalization weight falls above and half falls below.

Weighted average market capitalization represents the average value of the companies held in the portfolio. When that figure is weighted, the impact of each company's capitalization on the overall average is proportional to the total market value of its shares.

Market capitalization measures the number of outstanding common shares of a given corporation multiplied by the latest price per share.

Standard deviation measures the risk or volatility of an investment's return over a particular time period; the greater the number, the greater the risk.

The **up-capture ratio** measures the manager's overall performance to the benchmark's overall performance, considering only quarters that are positive in the benchmark. An up-capture ratio of more than 100 indicates a manager who outperforms the relative benchmark in the benchmark's positive quarters.

The **down-capture ratio** is the ratio of the manager's overall performance to the benchmark's overall performance, considering only quarters that are negative in the benchmark. A down-capture ratio of less than 100 indicates a manager who outperforms the relative benchmark in the benchmark's negative quarters and protects more of a portfolio's value during down markets.

Alpha is a measure of performance vs. a benchmark on a risk-adjusted basis. A positive alpha of 1.0 means the portfolio has outperformed its benchmark index by 1%. Correspondingly, a similar negative alpha would indicate an underperformance of 1%. Alpha is a measure of the difference between actual returns and expected performance measuring sensitivity to index movements.

Beta measures the sensitivity of an investment to the movement of its benchmark. A beta higher than 1.0 indicates the investment has been more volatile than the benchmark and a beta of less than 1.0 indicates that the investment has been less volatile than the benchmark.

Sharpe ratio is a risk-adjusted measure, calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better a portfolio's historical risk-adjusted performance.

R-squared measures the strength of the linear relationship between a fund and its benchmark. R-squared at 1.00 implies perfect linear relationship and zero implies no relationship exists.

Risks

All investments involve risks, including possible loss of principal. Depository receipts are subject to international investment risk and potentially negative effects from currency exchange rates, foreign taxation and differences in auditing and other financial standards. **International investments** are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in **emerging markets**. **Equity securities** are subject to price fluctuation and possible loss of principal. To the extent the portfolio invests in a **concentration of certain securities, regions or industries**, it is subject to increased volatility. **Liquidity risk** exists when securities or other investments become more difficult to sell, or are unable to be sold, at the price at which they have been valued. **Active management** does not ensure gains or protect against market declines. The portfolio is **non-diversified** and may invest in a relatively small number of issuers, which may negatively impact the performance and result in greater fluctuation in value. **Small- and mid-cap stocks** involve greater risks and volatility than large-cap stocks. The **investment style** may become out of favor, which may have a negative impact on performance. The manager may consider **environmental, social and governance (ESG) criteria** in the research or investment process; however, ESG considerations may not be a determinative factor in security selection. In addition, the manager may not assess every investment for ESG criteria, and not every ESG factor may be identified or evaluated.
