Past performance is not an indicator or a guarantee of future performance.

1. A composite is an aggregation of one or more portfolios into a single group that represents a particular investment objective or strategy. The composite return is the asset-weighted average of the performance results of all the fully discretionary portfolios in the composite. The composite return information provided herein includes the returns of Franklin Separately Managed Accounts, high-net-worth individual and institutional client portfolios and with respect to any periods prior to the inception of Franklin Separately Managed Accounts, reflects the performance of any such other portfolios.

2. Information is based on the Franklin Intermediate Investment Grade Credit SMA Composite. Total returns presented assume reinvestment of any dividends, interest income, capital gains, or other earnings. Net-of-fee returns are reduced by the total "wrap fee" which includes trading expenses as well as investment management, administrative and custodial fees. Gross returns are Pure gross and do not reflect the deduction of any transaction costs, including trading costs. Returns over one year are annualized.

3. Performance information is based on Franklin Intermediate Investment Grade Credit SMA Composite. Pure gross does not reflect the deduction of any expenses, including trading costs.
 4,6. Percentage may not equal 100% due to rounding. All holdings are subject to change. Portfolio characteristics are based on the Franklin Intermediate Investment Grade Credit SMA model portfolio, which is representative of the investment strategy. The model portfolio represents the expected allocation that would be used for new accounts and is updated as of the end of each quarter. The allocation of existing accounts may differ from the allocation used for new accounts due to differences in the timing of purchases and sales, changes in the purchase and sell list during the course of a quarter, general market conditions, and factors specific to each existing account due to client considerations. The securities used in developing this model portfolio do not reflect actual purchases in an account and may not reflect the impact that material economic and market factors might have had on decision making if Franklin Separately Managed Accounts were actually managing the account. The calculation for weighted averages are based on market value weights.

5. Yield figures quoted should not be used as an indication of the income that has or will be received. Yield figures are based on the portfolio's underlying holdings and do not represent a payout of the portfolio. **Past performance is not an indicator or a guarantee of future performance.**

7. Cash and equivalents are deemed to have a 0% Maturity and Duration, be Non-Callable and have an AAA rating.

Investment Philosophy

The strategy focuses on investments in high quality bonds, seeking to take advantage of relative valuation differences between sectors, issuers and individual bond issues, with the objective of producing a high level of current income and generating total return opportunities.

Investment Process

In choosing investments, our intermediate fixed income team follows a disciplined, client-specific process that includes using proprietary, relative value analysis to make top-down allocation decisions among investment grade credit securities. Managers and analysts then perform bottom-up, fundamental research that emphasizes credit quality and liquidity. Portfolios are constructed targeting benchmark neutral duration.

Our portfolio managers do not attempt to make interest rate bets through extending or reducing portfolio duration. Rather, they seek to add value primarily through asset allocation and security selection. Further, each client account is evaluated for risk tolerance, income and liquidity needs, maturity date and sector restrictions.

Glossary

Average Price: The average price stated on the securities held by a portfolio.

8. Ratings shown are assigned by one or more Nationally Recognized Statistical Rating Organizations ('NRSRO'), such as Standard & Poor's, Moody's and Fitch. The ratings are an indication of an issuer's creditworthiness and typically range from AAA or Aaa (highest) to D (lowest). When ratings from all three agencies are available, the middle rating is used; when two are available, the lowest rating is used; and when only one is available, that rating is used. Foreign government bonds without a specific rating are assigned the country rating provided by an NRSRO, if available. If listed, the Not Rated category consists of ratable securities that have not been rated by an NRSRO. The Not Applicable category consists of nonratable securities (e.g., equities). All holdings are subject to change.

9. Cash and equivalents are deemed to have a 0% Maturity and Duration, be Non-Callable and have an AAA rating.

10. Beta, Information Ratio and Tracking Error information are measured against the Bloomberg Barclays US Intermediate Credit Index.

11. Risk statistics are calculated using composite pure gross-of-fees. Pure gross does not reflect the deduction of any transaction costs, including trading costs. Returns over one year are annualized.

Average Weighted Maturity: An estimate of the number of terms to maturity, taking the possibility of early payments into account, for the underlying holdings. Maturity is expressed as a number of years.

Coupon Rate: The average interest rate stated on the securities held by a fund.

Duration to Maturity: A measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in its yield to maturity. Duration is expressed as a number of years. The weighted average duration to maturity reflects the effective duration of the underlying issues, based on the size of each holding.

Yield to Maturity: Yield to Maturity ('YTM') also known as the 'Gross Redemption Yield' or 'Redemption Yield'. The rate of return anticipated on a bond if it is held until the maturity date. YTM is considered a long-term bond yield expressed as an annual rate. The calculation of YTM takes into account the current market price, par value, coupon interest rate and time to maturity. It is also assumed that all coupons are reinvested at the same rate.

Yield to Worst: The yield to maturity if the worst possible bond repayment takes place. If market yields are higher than the coupon, the yield to worst would assume no prepayment. If market yields are below the coupon, the yield to worst would assume prepayment. In other words, yield to worst assumes that market yields are unchanged. Normally this value is not aggregated since it varies but if a weighted average value is used for a portfolio then the figure will reflect the values of the underlying issues, based on the size of each holding.

Important Legal Information

Franklin Separately Managed Accounts claims compliance with the Global Investment Performance Standards (GIPS®). GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Franklin Separately Managed Accounts (the “firm”) manages domestic equity and fixed income portfolios for high net worth individuals and institutional clients, applying a bottom-up, research-oriented process that utilizes proprietary screening models and top-down risk controls in managing its portfolios. Franklin Separately Managed Accounts is a division of Franklin Templeton Portfolio Advisors, Inc. (“FTPA”), a subsidiary of Franklin Resources, Inc. (“FRI”) and is a unit of the broader Franklin organization. At Franklin Separately Managed Accounts, brokerage, administrative, custodial and investment management fees are charged together as a percentage of the portfolios’ assets (comprehensive fee or “wrap-fee”) or may in some instances be charged separately (unbundled fee). Retail and Institutional separate accounts managed by affiliated Franklin entities are not included in the firm definition.

Franklin Intermediate Investment Grade Credit SMA Composite consists of all fully discretionary accounts with an intermediate taxable fixed income investment grade objective. The strategy seeks to generate a high level of current income as well as offer total return potential by investing in U.S. investment grade bonds. The composite includes wrap fee accounts that pay a fully bundled fee and non-wrap accounts that only pay an investment management fee to Franklin. No account(s) in the composite use leverage or derivatives.

The benchmark for this composite is the Bloomberg Barclays Intermediate U.S. Credit Index, which is a market-value weighted fixed income index comprised of U.S. dollar denominated, investment grade, publicly issued fixed income securities of both corporate and non-corporate issuers with a maturity between one and ten years and a minimum amount outstanding of \$250 million.

All investments involve risks, including the loss of principal. Generally, investments offering the potential for higher returns are accompanied by a higher degree of risk. Bond prices are affected by interest rate changes. High-yield, lower-rated (junk) bonds generally have greater price swings and higher default risks. Investors should review their investment objectives, risk tolerance and liquidity needs before choosing a manager. Securities markets can fluctuate significantly in response to industry, financial or economic developments, and unexpected events, such as the spread of deadly disease or disasters, can cause investor fear and panic, which can adversely affect companies, sectors and the market in general. There is no guarantee that investment strategies will work under all market conditions and investors should evaluate their ability to invest for the long term, especially during periods of market downturns.

The composite performance results are presented in U.S. Dollars and have been calculated using time-weighted total rates of return. For wrap fee composites, net of fee returns are net of actual total wrap fees. The total wrap fee includes brokerage fees (i.e. trading expenses), investment management, administrative and custodial fees. For portfolios where the actual total wrap fee is unknown, the highest model fee applicable for the strategy is used to calculate the net return. Any administrative or custodial fees charged to accounts over and above the wrap fee that are specifically identified as such fees are treated as cash withdrawals and do not negatively impact performance. Gross of fee returns for wrap fee composites are pure gross before wrap fees, including brokerage fees related to trading expenses for transactions executed through the sponsor. All returns assume the reinvestment of dividends, interest, and realized and unrealized capital gains and losses. Returns for periods of less than one year are not annualized. Periods greater than one year are shown as average annual total returns. Performance data is shown rounded to the nearest hundredth. **Past performance is not an indicator or a guarantee of future performance.**
