

Discover: The 3 Ds of investing

What is a mutual fund?

A mutual fund is an opportunity for you, together with many other investors, to pool your money.

Professional money managers invest the “pool” for you, keeping the investments under constant supervision. The money managers use their knowledge of securities and changing market conditions to invest the pooled assets in many different companies within a variety of industries.

Do you know the Rule of 72?

One important concept in mutual fund investing is the power of compound interest—especially the Rule of 72. An account could double at a certain point determined by dividing 72 by the percent of interest.

Dividing 72 by the interest rate...

...equals the number of years it takes your money to double.

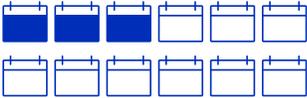

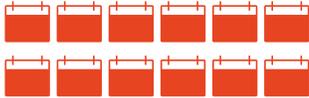

Years	3%	6%	9%
0	\$10,000	\$10,000	\$10,000
4			
8			\$20,000
12		\$20,000	
16			\$40,000
20			
24	\$20,000	\$40,000	\$80,000
28			
32			\$160,000
36		\$80,000	
40			\$320,000
44			
48	\$40,000	\$160,000	\$640,000

Hypothetical example for illustrative purposes only.

This table serves as a demonstration of how the Rule of 72 concept works from a mathematical standpoint. It is not intended to represent an investment. The chart uses constant rates of return, unlike actual investments, which will fluctuate in value. It does not include fees or taxes, which would lower performance. It is unlikely that an investment would grow 9% or more on a consistent basis, given current market conditions.

Consider three fundamental accounts

Your financial strategy should begin with the following three accounts, **an emergency account**, **a short-term account** and **a wealth-building account**.

Emergency account	Short-term account	Wealth-building account
 <p>Goals:</p>  <p>Up to 3 months of income</p> <p>Emergencies</p> <hr/> <p>Uncovered medical expense</p> <hr/> <p>Major car repair</p>	 <p>Goals:</p>  <p>Up to 6 months of income</p> <p>Reserved for unforeseen events</p> <hr/> <p>Loss of job</p> <hr/> <p>Purchase a car</p> <hr/> <p>Down payment for a house</p>	 <p>Goals:</p>  <p>Long term/retirement</p> <p>Roth or Traditional IRA</p> <hr/> <p>401(k)</p> <hr/> <p>Solo(k)</p> <hr/> <p>Tax-deferred accounts</p> <hr/> <p>Educational funding</p>

When considering your wealth-building account, it's important to know that the dollar that you have today may not hold its same value tomorrow. **Don't let inflation take away your purchasing power.**

Please note: early withdrawals from certain retirement savings and tax-deferred accounts may be subject to penalties.

Plan for the long term

Inflation is the rise in prices over time. As you can see below, the cost of basic items, as well as college education, is expected to increase significantly as we look ahead. One of the best ways to combat inflation is planning well in advance.

Example 1: How much more will things cost in retirement?¹

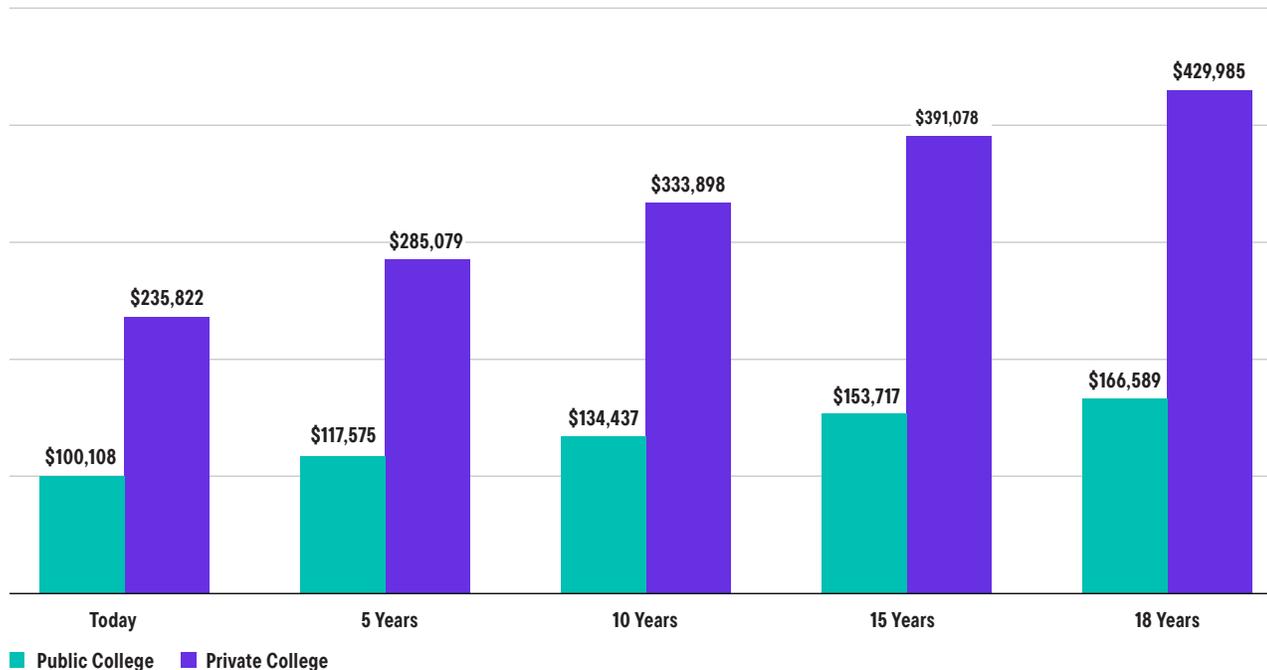

* 2044 figures are based on historical averages. The hypothetical examples are for illustrative purposes only and are not intended to predict or project inflation rates. Actual inflation rate may be higher or lower.

Example 2: Projected average cost for four years of college

College education expenses have climbed over 2.70% annually during the past 10 years. That means a child born today could need over \$160,000 to attend a four-year public college.

Projected Average Cost for Four Years of College²

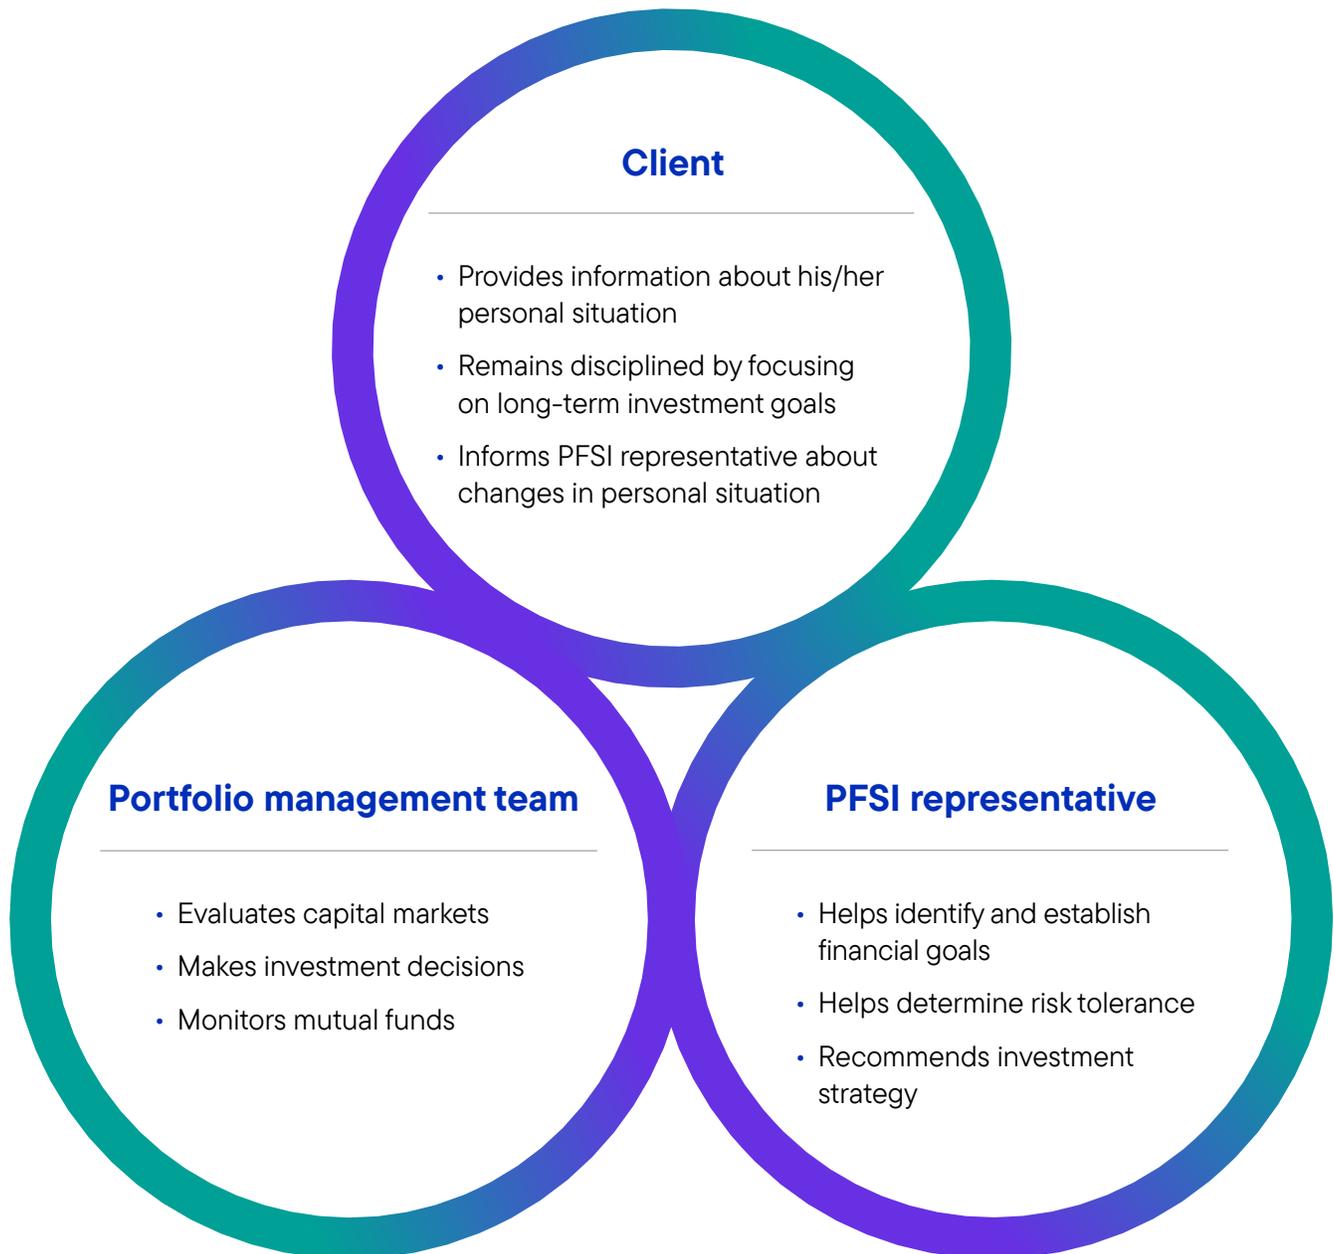

1. Based on an average annual inflation rate of 2.56% for the 20-year period ended December 31, 2024. Source: US Postal Regulatory Commission. US stamp prices are based on the year-end rate for the first ounce of a first-class letter. Source: US Bureau of Labor Statistics. Price per gallon of milk prior to 1995 is based on year-end price per gallon. Source: US Department of Commerce. New car historical prices are based on average prices per year, due to seasonality.

2. Trends in College Pricing, © 2023 The College Board, www.collegeboard.org. Projected cost based upon child's entrance to a four-year public or private college. As reported by the College Board for 2023-24, the \$24,030 public college cost and \$56,190 private college cost include tuition, fees, room and board. College cost inflation figures of 2.72% (public) and 3.21% (private) are based on the 10-year average annual increase in public and private college costs respectively, as reported by The College Board for 2023-24.

Your investment team

You are not alone. Your PFSI representative helps you find the right direction and investment professionals—like your fund’s portfolio managers—to help you stay on course.

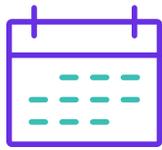

The 3 Ds of investing

1 Diversification³

By owning a piece of many different types of investments within a fund, you may soften the blow if any single investment suffers a downturn. At the same time, you increase the chances of benefiting if one security gains favor over another.

2 Discipline

A commitment to saving is one of the key ingredients to successful investing. Once you've figured out how much you need to reach your long-term goals, persevere! Don't let temporary setbacks derail your financial dreams.

3 Dollar-cost averaging³

Dollar-cost averaging allows you to chip away at your long-term goals. Basically, it involves contributing a smaller, preset amount at regular intervals—monthly or quarterly—instead of a large, one-time sum. This approach can reduce the average cost per share and spread out your investment risk over time.

³ Diversification and dollar-cost averaging do not guarantee a profit or protect against investment loss. All investing involves risk, including possible loss of principal.

Diversification

Why diversify? Because winners rotate.

Perhaps nothing better illustrates the need for an asset allocation plan than the chart below, which shows how various asset classes performed on a year-by-year basis from 2015 through 2024. The best-performing asset class for each calendar year is at the top of each column. Please remember, past performance does not guarantee future results.

	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024

Source: Morningstar. **Large growth stocks** are represented by the S&P Growth Index; **Large value stocks** are represented by the S&P 500 Value Index; **Small growth stocks** are represented by the Russell 2000 Growth Index; **Small value stocks** are represented by the Russell 2000 Value Index; **Foreign stocks** are represented by the MSCI EAFE Index; **Bonds** are represented by the Bloomberg US Aggregate Bond Index; **High yield bonds** are represented by the Credit Suisse High Yield Index; **Emerging market stocks** are represented by the MSCI Emerging Markets Index; **Global bonds** are represented by the FTSE World Government Bond Index; and **Asset allocation portfolio** reflects an equal investment at the start of the year in each of the ten asset classes. **USD cash** is represented by the ICE BofA US 3M Trsy Bill TR USD. **Indexes are unmanaged and one cannot invest directly in an index. Index returns do not reflect any fees, expenses or sales charges. Past performance is no guarantee of future results. Diversification does not guarantee a profit or protect against loss.** Certain asset classes carry relatively higher risks. Small capitalization stocks can be more volatile than large capitalization stocks. High-yield bonds have a higher risk of default and loss of principal compared to US investment grade bonds. Foreign investing involves special risks, including currency fluctuations, and political and economic uncertainty. Emerging markets stocks involve heightened risks related to the same factors, in addition to those associated with their relatively small size and lesser liquidity. Investment in hedge strategies are speculative investments, entail significant risk and should not be considered a complete investment program.

Discipline

The odds have favored investors who take a long-term approach. Historically, sticking to a long-term investment strategy has paid off with average stock market returns being mostly positive over time.

Positive versus Negative Average Annual Returns for the S&P 500 (1937–2024)⁴

Though the stock market's returns vary tremendously, the average returns for the S&P 500 were positive in 76% of the years from 1937 to 2024.

10.7% average annual return:

67 positive years

19.9% average positive return

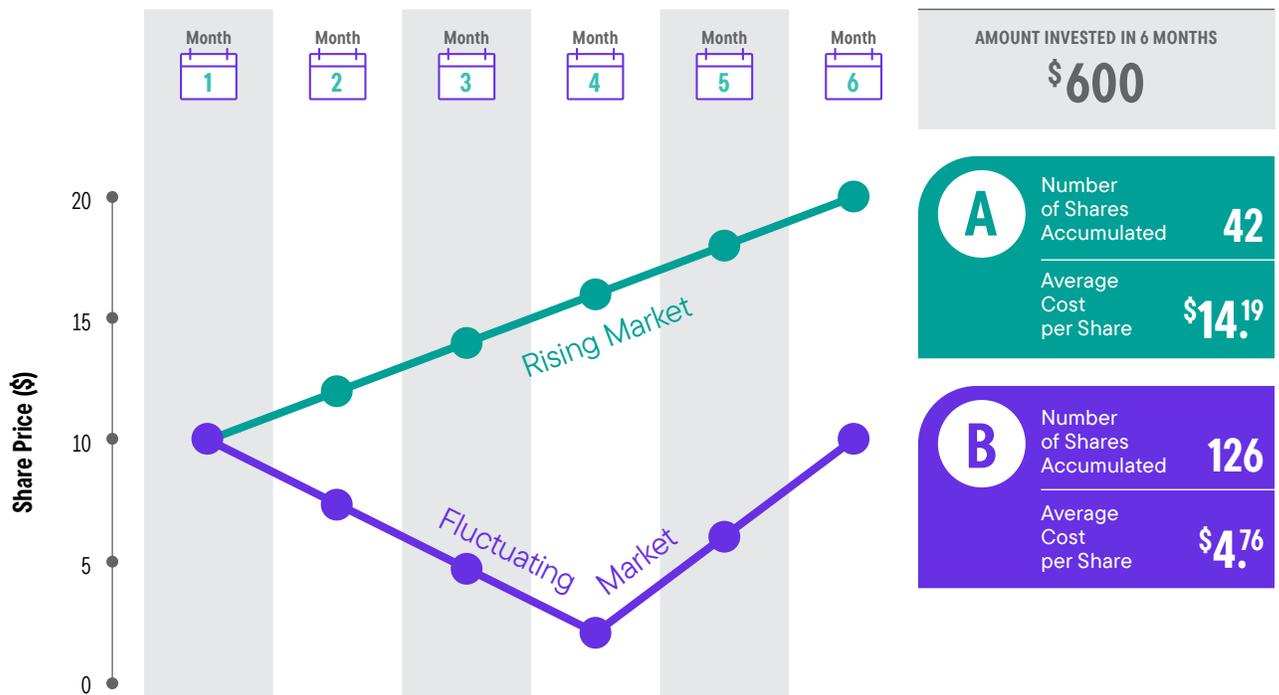

4. Source: Franklin Templeton. Each calendar year listed in chart reflects average annual performance from December 31 of prior year to December 31 of listed year. Returns prior to 1957 are representative of the S&P 90 Index, a value-weighted index based on 90 stocks. Performance shown reflects the effects of dividend reinvestment. This chart is for illustrative purposes only and does not represent actual performance, past or future, of any investment.

The S&P 500 Index (S&P 500) is an unmanaged index of 500 stocks that is generally representative of the performance of larger companies in the US. Performance does not reflect the impact of fees and expenses. Investors cannot invest directly in an index. Unmanaged index returns do not reflect any fees, expenses or sales charges.

Dollar-cost averaging

Regular investing can support investor goals in varying market conditions. This eliminates having to predict when to invest, as you will be able to take advantage of the market highs and lows—by purchasing fewer units when the prices are high and more units when the prices are low.

Investor A

Invests \$100 per Month	Cost per Share (\$)	10.00	12.00	14.00	16.00	18.00	20.00
	Number of Shares	10.00	8.33	7.14	6.25	5.56	5.00

Investor A bought fewer shares as cost per share rose.

Investor B

Invests \$100 per Month	Cost per Share (\$)	10.00	7.00	4.00	2.00	6.00	10.00
	Number of Shares	10.00	14.29	25.00	50.00	16.67	10.00

Investor B bought more shares as cost per share dropped.

The chart above is a hypothetical scenario intended for illustrative purposes only.

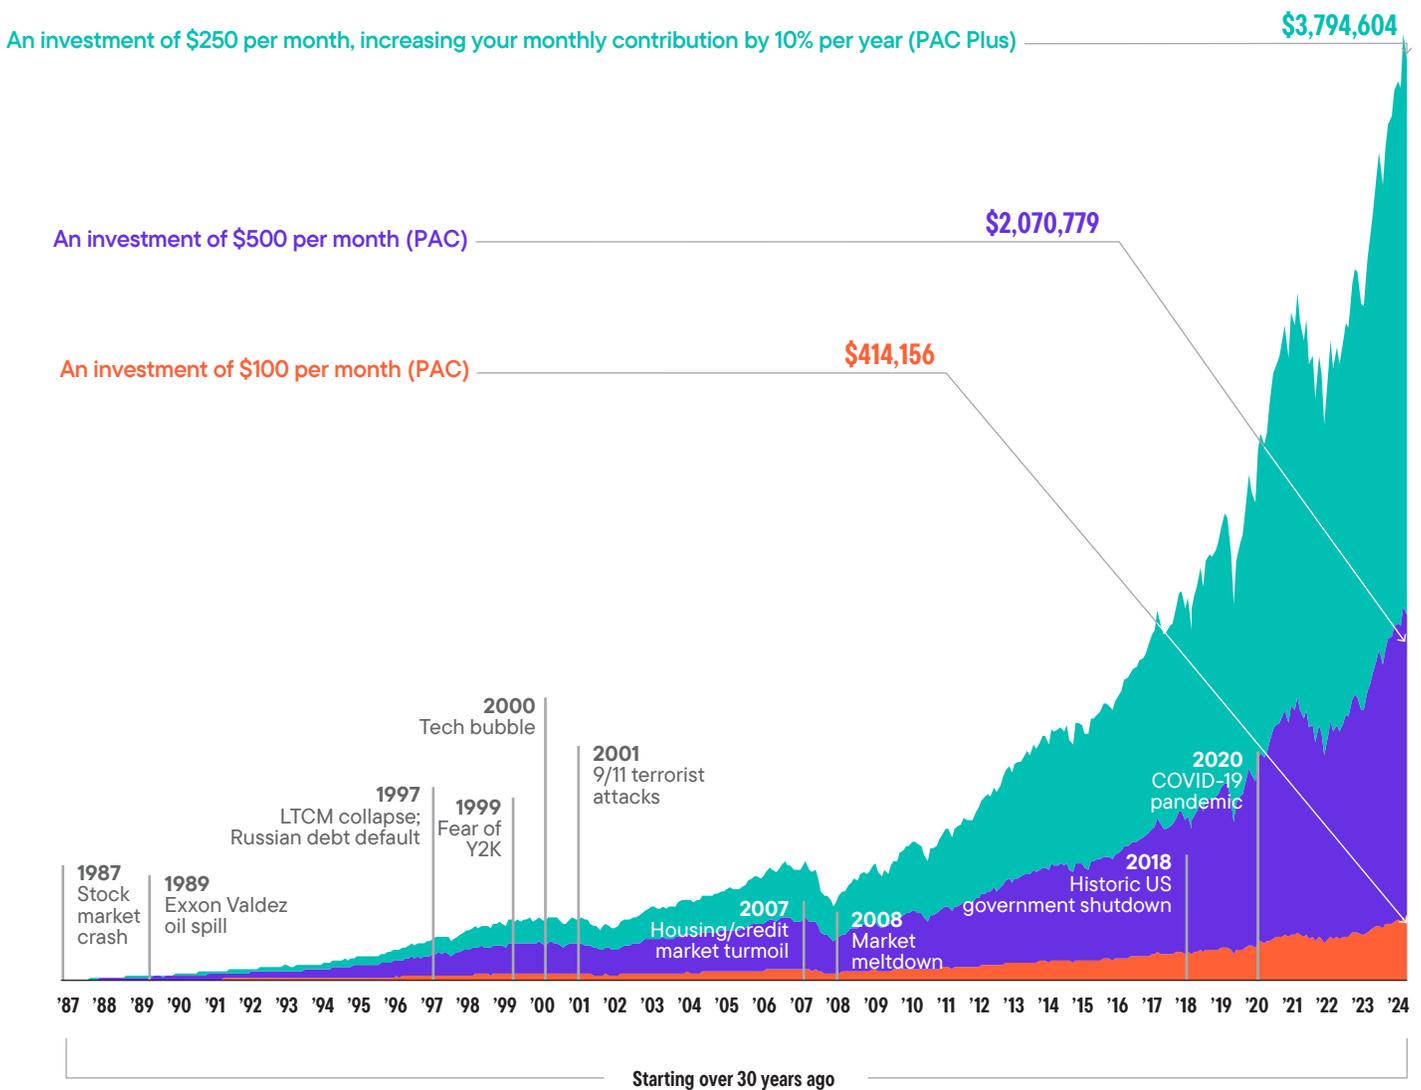

Periodic investment plans do not ensure a profit and do not protect against investment loss in declining markets. Since dollar-cost averaging involves continuous investment in securities regardless of fluctuating price levels of such securities, an investor should consider his/her financial ability to continue purchasing through periods of low price levels.

How it works

Long-term discipline and dollar-cost averaging at work with the ClearBridge Appreciation Fund.⁵

The following shows the long-term effect of investing in ClearBridge Appreciation Fund (SHAPX).

As you can see, sticking to a regular, long-term investment plan can have a big impact. Dollar-cost averaging through different market cycles and market conditions can alter over time. This is why some investors consider using a dollar-cost averaging strategy—also known as Pre-Authorized Checking (PAC) or PAC Plus (PAC with a fixed contribution increase each year)—in an effort to reach their long-term investment goals.

The ClearBridge Appreciation Fund was selected for this example due to its investment focus, manager tenure and length of performance track record.

The chart above is a hypothetical scenario using the historical returns of the ClearBridge Appreciation Fund (including sales charges), which is intended for illustrative purposes only. The chart above assumes a start date of December 1987. The total contribution amount for each hypothetical scenario would equal: \$44,400 (investing \$100 per month for 37 years), \$222,000 (investing \$500 per month for 37 years) and \$945,684 (investing \$250 per month, increasing monthly contributions by 10% per year for 37 years).

Past performance is not an indicator or a guarantee of future performance and current performance may be higher or lower than the performance shown. Principal value and investment returns will fluctuate and investors' shares, when redeemed, may be worth more or less than the original cost.

5. See attached fact card for latest performance information.

Investment profile questionnaire

Please use the below Investment Profile Questionnaire to help you determine your Model Portfolio Match. Use the check boxes to help guide you to the correct Model Portfolio. To begin, check the box for the answer to Investment Profile Question 1 (column 1), then move directly to the right and check the box for the answer to Investment Profile Question 2 (column 2), then move directly to the right and check the box for the answer to Investment Profile Question 3 (column 3). To locate the Model Portfolio that corresponds with the client's answers, move directly to the right and locate the check mark in the column which indicates the Model Portfolio that corresponds with the client's answers. Check the Chosen Model Portfolio decision at the bottom of the Investment Profile Questionnaire. Note to the Registered Representative: For additional assistance, you may also use the SB-72: Mutual Fund Suitability Guide and Approved Fund List which provides comprehensive examples to help complete the Model Portfolio Guide.

Chosen Model Portfolio: Aggressive Growth Growth Moderate Growth Conservative Growth Income

Use the model portfolio match determination from the other side to determine your investment profile

Your investment strategy requires thought and planning. Please review and discuss with your representative the investment profile questionnaire. These questions are intended to ascertain a recommended Model Portfolio (below) for you based on three factors that impact investing decisions: investment goal, time horizon and your willingness to accept risk. As you complete the questionnaire, remember that investing involves a trade-off between risk and return. The higher the returns you seek, usually the greater amount of risk you must take on. Historically, investors who have experienced higher long-term average returns have also experienced greater fluctuations in the value of their investments and more frequent periods of negative performance than conservative investors. After completing the questionnaire, your representative will review with you the recommended Investment Profile and Model Portfolio (see below) and use these to help recommend suitable investments for you. If you believe that the resulting Investment Profile does not reflect your approach to investing, please discuss this with your representative. You may review the Investment Profile Guide to understand how changing your answers to the questions may affect the results. As always when investing, remember that the past performance of an investment does not guarantee its future results.

Model portfolio

(Note: The Model Portfolio's percentages listed below are based upon the client's net worth)

Model	Investment Profile
Aggressive Growth	This portfolio is appropriate for investors whose primary objective is maximum long-term capital appreciation and who are willing to tolerate more substantial, potentially large price fluctuations. Generating current income is not a goal. Assets in this portfolio are invested entirely (or almost entirely) in equities (stocks).
Growth	This portfolio is appropriate for investors whose primary objective is long-term capital appreciation and who are willing to tolerate potentially large price fluctuations. Generating current income is not a primary goal. Assets in this portfolio are invested primarily (and in some cases entirely) in equities (stocks).
Moderate Growth	This portfolio is appropriate for investors whose primary objective is capital appreciation and to whom current income is of secondary importance. A moderate growth investor is willing to tolerate short-term price fluctuations. The assets in this portfolio are a mix of equities (stocks) and fixed-income securities (bonds), with a higher weighting towards equities (stocks).
Conservative Growth	This portfolio is appropriate for investors who prefer current income to capital appreciation, but are willing to tolerate some short-term price fluctuations associated with equity (stock) investments. The assets in this portfolio are balanced among equities (stocks) and fixed-income securities (bonds).
Income	This portfolio is appropriate for investors whose primary objective is current income. The majority of assets in this portfolio are allocated to short-term and intermediate-term investments such as fixed-income securities (bonds). A portion of this portfolio is also invested in equities (stocks) as potential hedge against the erosion to purchasing power caused by inflation.

After discussing your Investment Profile with your PFS Investments Inc. Registered Representative, please initial:	Representative Initials: _____ Client Initials: _____ Date: _____

Mutual fund spotlight

Whether seeking growth, income or capital preservation, Franklin Templeton has an assortment of solutions that may be suitable for you. Here are a few for your consideration. Your PFSI Representative will help select the right single solution or model portfolio mix, that aligns with your identified investor profile.

Fund Name	Primerica Category	Morningstar Category	Description
ClearBridge Dividend Strategy Fund (SOPAX)	Large Cap Equity/Fund of Funds	Large Blend	Seeks to invest in high-quality stocks with an attractive or improving dividend profile. Seeks a combination of dividend income, dividend growth and long-term capital appreciation. Uses fundamental analysis to select a diversified portfolio of companies with long histories of paying and raising dividends.
ClearBridge International Growth Fund (LGGAX)	International Equity Fund	Foreign Large Growth	All-cap growth portfolio that exploits mispriced opportunities across the entire spectrum of growth and across all countries.
ClearBridge Large Cap Growth Fund (SBLGX)	Large Cap Equity/Fund of Funds	Large Growth	A high-conviction, concentrated portfolio with a risk-aware approach to investing across the spectrum of growth.
ClearBridge Mid Cap Fund (SBMAX)	Aggressive Equity Fund	Mid-Cap Blend	Invests in a diversified equity portfolio focused on mid-sized companies. Seeks long-term capital growth through a disciplined, consistent and transparent investment process. Investment returns are driven by stock selection, with a strong focus on risk management in portfolio construction.
ClearBridge Select Fund (LCLAX)	Aggressive Equity Fund	Mid-Cap Growth	A high-conviction yet balanced all-cap portfolio with a focus on companies with strong growth potential that are in an earlier stage of their life cycle.
Franklin DynaTech Fund (FKDNX)	Large Cap Equity/Fund of Funds	Large Growth	Invests primarily in companies that management believes are leaders in innovation, take advantage of new technologies, have superior management and benefit from new industry conditions in the dynamically changing global economy.
Franklin Equity Income Fund (FISEX)	Large Cap Equity/Fund of Funds	Large Value	This fund normally invests at least 80% of its net assets in equity securities, with a focus on financially-strong “blue chip” companies and the remainder of its assets in other equity-related instruments such as convertible securities and equity-linked notes.

Fund Name	Primerica Category	Morningstar Category	Description
Franklin Income Fund (FKIQX)	Balanced Fund	Allocation 30% to 50% Equity	This fund invests in a diversified portfolio of dividend-paying stocks, equity-related securities and bonds.
Franklin Core Plus Bond Fund (FRSTX)	Taxable Bond/Income Fund	Multisector Bond	The fund seeks to provide a high level of current income. Its secondary goal is capital appreciation over the long term. The fund is a multi-sector income fund that invests primarily in US and foreign debt securities.
Franklin Rising Dividends Fund (FRDPX)	Large Cap Equity/Fund of Funds	Large Blend	Fund managers seek to invest in resilient companies with consistent and robust dividend growth for their long-term capital appreciation potential.
BrandywineGLOBAL – High Yield Fund (BGHAX)	Aggressive Bond Fund	High Yield Bond	A nimble, actively managed fixed income strategy that seeks high current income and capital appreciation by investing primarily in high yield corporate bonds.
Western Asset Income Fund (SDSAX)	Taxable Bond/Income Fund	Multisector Bond	A global unconstrained strategy that seeks to generate high income with an allocation of capital across opportunistic sectors of the fixed-income markets.
Western Asset Ultra-Short Income Fund (ARMZX)	Taxable Bond/Income Fund	Ultra-Short Bond	A primarily investment grade portfolio that seeks current income and capital preservation while maintaining liquidity.

ClearBridge Appreciation Fund

Class A: SHAPX Class C: SAPCX Class FI: LMPIX Class I: SAPYX Class IS: LMESX Class R: LMPPX

Large Cap | Factsheet as of December 31, 2025

Investment Overview

Invests primarily in equity securities of US companies. Typically focusing on medium and large cap companies, but may also invest in small cap companies. Seeks long-term capital appreciation potential in core equity holdings that strike a careful balance between reward and risk. Targets companies with effective management, superior earnings growth and strong or improving fundamentals.

Performance data quoted represents past performance, which does not guarantee future results. Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. Returns with sales charge reflect a deduction of the stated maximum sales charge. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges. Returns for periods of less than one year are not annualized. All classes of shares may not be available to all investors or through all distribution channels. For current month-end performance, please visit franklintempleton.com.

Effective August 2, 2021, except as noted below, Class C [including Class C, Class C-1 & Class C-2] shares will automatically convert to Class A shares after the shares have been held for 8 years from their original purchase date. The initial conversion took place on August 16, 2021. Refer to the fund's prospectus or contact your Service Agent for more information.

Gross expenses are the fund's total annual operating expenses as of the fund's prospectus available at the time of publication. Net expenses are capped under a contractual agreement, which cannot be terminated prior to 12/31/2026 without Board consent. Actual expenses may be higher and may impact portfolio returns. There is a 1% CDSC on any Class C shares you sell within 12 months of purchase. Maximum sales charges have been updated as of August 15, 2022, please refer the Fund's prospectus for more information.

Clearbridge Investments is an active equity manager offering a broad range of strategies across global developed and emerging markets, local markets, and income.

What should I know before investing?

All investments involve risks, including possible loss of principal. Equity securities are subject to price fluctuation and possible loss of principal. **Small- and mid-cap stocks** involve greater risks and volatility than large-cap stocks. **Short selling** is a speculative strategy. Unlike the possible loss on a security that is purchased, there is no limit on the amount of loss on an appreciating security that is sold short. **International investments** are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in **emerging markets**. The manager may consider **environmental, social and governance (ESG) criteria** in the research or investment process; however, ESG considerations may not be a determinative factor in security selection. In addition, the manager may not assess every investment for ESG criteria, and not every ESG factor may be identified or evaluated. These and other risks are discussed in the fund's prospectus.

Glossary

Beta: A measure of the fund's volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market. **R-squared** measures the strength of the linear relationship between the fund and its benchmark. R-squared at 1 implies perfect linear relationship and zero implies no relationship exists. **Sharpe ratio** refers to a risk-adjusted measure calculated using standard deviation and excess returns to determine reward per unit of risk. The higher the ratio, the greater the risk-adjusted performance. **Standard deviation:** Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return. **Alpha** is the annualized percentage difference between a portfolio's actual returns and its expected performance given its level of market risk, as measured by beta. **Information ratio:** In investing terminology, the ratio of expected return to risk. Usually, this statistical technique is used to measure a manager's performance against a benchmark. This measure explicitly relates the degree by which an investment has beaten the benchmark to the consistency by which the investment has beaten the benchmark. **Tracking error** measure of the deviation of the return of a fund compared to the return of a benchmark over a fixed period of time. Expressed as a percentage. The more passively the investment fund is managed, the smaller the tracking error. **Turnover** is a measure of the fund's trading activity which represents the portion of the fund's holdings that has changed over a twelve-month period through the fiscal year end. There is no assurance that the fund will maintain its current level of turnover. **Weighted average market capitalization:** A determination of a company's value, calculated by multiplying the total number of company stock shares outstanding by the price per share. For a portfolio, the value represents a weighted average based on the stocks held. **Price to book:** The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to earnings (12-Month Trailing)** is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds.

Before investing, carefully consider a fund's investment objectives, risks, charges and expenses. You can find this and other information in each prospectus, or summary prospectus, if available, at www.franklintempleton.com. Please read it carefully.

What should I know before investing?

All investments involve risk, including loss of principal. **Equity securities** are subject to price fluctuation and possible loss of principal. An increase in interest rates will reduce the value of fixed-income securities. **Small- and mid-cap stocks** involve greater risks and volatility than large-cap stocks. **International investments** are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in **emerging markets**. The manager may consider **environmental, social and governance (ESG)** criteria in the research or investment process; however, ESG considerations may not be a determinative factor in security selection. In addition, the manager may not assess every investment for ESG criteria, and not every ESG factor may be identified or evaluated. These and other risks are discussed in the fund's prospectus. **Real estate investment trusts (REITs)** are closely linked to the performance of the real estate markets. REITs are subject to illiquidity, credit and interest rate risks and risks associated with small- and mid-cap investments. **Dividends** are not guaranteed and a company may reduce or eliminate its dividend at any time. **Short selling** is a speculative strategy. Unlike the possible loss on a security that is purchased, there is no limit on the amount of loss on an appreciating security that is sold short. **Derivatives**, such as options and futures, can be illiquid, may disproportionately increase losses and have a potentially large impact on Fund performance. Possible active and frequent trading may result in higher transaction costs and increased investor liability. **The manager's investment style** may become out of favor and/or the manager's selection process may prove incorrect, which may have a negative impact on the Fund's performance. **Fixed-income securities** involve interest rate, credit, inflation and reinvestment risks. Asset-backed, mortgage-backed or mortgage-related securities are subject to additional risks, such as prepayment and extension risks. **High-yield bonds** possess greater price volatility, illiquidity and possibility of default. The use of **leverage** may increase volatility and possibility of loss. An investor may be subject to the federal **Alternative Minimum Tax (AMT)** and state and local taxes may apply. **Capital gains**, if any, are fully taxable. The Fund is **not diversified**, which means that it is permitted to invest a higher percentage of its assets in any one issuer than a diversified fund. This may magnify the Fund's losses from events affecting a particular issuer.
