INVESTING IN INNOVATION: FRANKLIN DYNATECH SMA

Franklin Separately Managed Accounts

Franklin DynaTech is a diversified growth strategy which has focused on investing in innovation since 1968.¹ The investment team researches, investigates, explores, studies and scrutinizes the greatest innovations of our time, looking for the best potential investments. They seek to identify those companies and industries with compelling products, new processes, strong management and disruptive technologies. Our investment team is headquartered near the heart of Silicon Valley, allowing the managers and analysts firsthand access to research and the opportunity to build relationships with companies at the forefront of innovation today.

The heart of the investment philosophy is the belief that innovation drives long-term wealth creation. Importantly, the team views the world today through an investment lens that spans decades of history.

Innovation Is Accelerating

We are living in a period of unprecedented economic change, often referred to as the fourth industrial revolution.² This affords us with a compelling backdrop in which to invest, as new companies, technologies, and ideas are brought into the marketplace.

Innovation Demands Active Management

In our view, innovation is one of the most misunderstood parts of the market and demands active management. New technologies, products and processes can impact our daily lives; however, their prospects as investments may vary significantly as the expectations of market participants change over time. Some innovations may be great investments today, or far in the future, or never at all.

Innovation Is Everywhere

The Franklin DynaTech investment team expects five platforms of growth, spanning myriad sectors and industries, to generate considerable economic value over the next five to ten years.

FRANKLIN DYNATECH: PLATFORMS OF GROWTH³

IMPORTANT INFORMATION

This piece contains certain performance and statistical information. There is no assurance that employment of any of the strategies will result in the intended targets being achieved. Past performance does not guarantee future results and results may differ over future time periods.

All investments are subject to certain risks. Generally, investments offering the potential for higher returns are accompanied by a higher degree of risk. Stocks and other equities representing an ownership interest in a corporation have historically outperformed other asset classes over the long term but tend to fluctuate more dramatically over the shorter term. Small or relatively new companies can be particularly sensitive to changing conditions due to factors such as relatively small revenues, limited product lines, and small market share. Smaller-company stocks have historically exhibited greater price volatility than larger-company stocks, particularly over the short term. Special risks are associated with foreign investing, including currency fluctuations, economic instability and political developments. Investments in emerging markets involve heightened risks related to the same factors and are less liquid. Investors should review their investment objectives, risk tolerance and liquidity needs before choosing a manager. Securities markets can fluctuate significantly in response to industry, financial or economic developments, and unexpected events, such as the spread of deadly disease or disasters, can cause investor fear and panic, which can adversely affect companies, sectors and the market in general. There is no guarantee that investment strategies will work under all market conditions and investors should evaluate their ability to invest for the long term, especially during periods of market downturns.

To obtain specific information on available products and services or GIPS compliant performance information, contact your Franklin Templeton separately managed account sales team at (800) 822-8464.

Information is historical and may not reflect current or future portfolio characteristics. All portfolio holdings are subject to change.

4. The portfolio characteristics listed are based on the composite's underlying holdings, and do not necessarily reflect the composite's characteristics. Due to data limitations all equity holdings are assumed to be the primary equity issue (usually the ordinary or common shares) of each security's issuing company. This methodology may cause small differences between the portfolio's reported characteristics and the portfolio's actual characteristics. In practice, Franklin Templeton's portfolio managers invest in the class or type of security which they believe is most appropriate at the time of purchase. The market capitalization figures for the portfolio are at the security level, not aggregated up to the main issuer. Source: FactSet. Price Ratio calculations for the weighted average use harmonic means. Any exceptions to this are noted. The IBES Estimated 3–5-Year EPS Growth uses simple weighted average means; there can be no assurance that the estimated figure will be realized. Market capitalization statistics are indicated in the base currency for the portfolio presented.

5. Weightings as percent of total. Percentage may not total 100% due to rounding.
