FIVE TRUTHS ABOUT MUNICIPAL BONDS

TRUTH 1 | Periods of volatility may provide attractive opportunities and potentially higher income for long-term municipal bond investors.

Over the past few years the municipal market has seen some bouts of volatility, stemming from fears of higher interest rates as well as isolated credit events in Puerto Rico and Detroit. In many cases, the realities are far less serious than reported and may not reflect the underlying fundamentals of the market. Market volatility may also provide the opportunity for potentially higher income for long-term municipal bond investors. Increased volatility causes yields to move higher, and prices lower. As seen in Chart 1 below, investors tend to sell when there is volatility and higher yields. However, we believe that is an attractive time for investors to take advantage of the opportunity for increased income because over the past 20 years, municipal yields have generally come down from their highs.

When interest rates rise, it's true that bond prices generally fall. However, when interest rates rise, bond investors also have the opportunity to invest in new, higher-yielding bonds. Municipal bond prices are sensitive to interest rate movements and as history has shown, even experts can't precisely predict when, in which direction or by how much long-term interest rates will change. They also can't precisely predict the market reaction, such as a municipal bond sell-offs. When markets sell off, there may be an opportunity for the savvy investor to increase income by investing in the higher-yielding bonds. By contrast, worried investors sitting on the sidelines may miss out on this potential income.

For municipal bond investors, income has its advantages and has been the primary driver of total returns. Over the long term, income historically has contributed much more to municipal bond total returns than price appreciation (chart 2).² And over the short term, income has helped to cushion overall municipal bond total returns when prices declined (chart 3). Although the prices of municipal bonds declined in 13 out of 28 calendar years illustrated here, the bonds' income helped offset the price movements. In fact, after considering income, municipal bonds experienced negative total returns in only 4 out of the 28 calendar years.³ Please remember, past performance does not guarantee future results.

TRUTH 3 | Municipal bond investors face a staggering number of choices, so it is important that they understand their different options.

The municipal bond market currently includes over 117,000 issuers and over 940,000 outstanding issues.⁴ And even for the same issuer, there can be different securities with different structures. Within this vast and very diverse universe, municipal bond investors must carefully evaluate individual bonds based on numerous factors, including their respective sectors, maturities, yields, risk, covenants and bondholder protections. Against this complex backdrop, it is more important now than ever for investors to know what they are holding. A knowledgeable and experienced research team identifies what it considers to be attractive investment opportunities based on a number of criteria and, more importantly, can manage potential problems.

TRUTH 4 | Municipal bond fund managers can take very different approaches to investing.

For example, in an effort to boost their funds' yields, some managers use leverage, invest in derivatives or invest heavily in lower-quality sectors. In the municipal bond market, leverage is generally associated with greater volatility of principal. Other managers like Franklin, stick to a conservative, "plain vanilla" approach, to maximize income. It's wise for investors to be aware of these and other differences so they can make sure their municipal bond fund has a management approach that matches their individual financial goals, time horizon and risk tolerance.

TRUTH 5 | Everyone can benefit from municipal bonds, not just the wealthy.

Municipal bonds are used to fund the public works projects that affect all of us every day. They fund the roads and bridges we drive over daily and the water facilities that support our homes and the schools in our neighborhoods. For investors, municipal bonds can also play an important role in generating retirement income.

Do Franklin Tax-Free Income Funds Have a Place in Your Portfolio?

Franklin tax-free income funds invest in municipal bonds. To help meet your individual investment needs, we manage 30 funds, including national- and state-specific, investment-grade and high-yield, and long-, intermediate- and limited-term funds. The funds seek to provide monthly income free from regular federal, and depending on the fund and the investor's state of residency, state and local income taxes.⁵ For over thirty years, Franklin tax-free income fund managers have adhered to a conservative approach to generate tax-free income for shareholders. We encourage you to work with your financial advisor to determine if these funds are the right choice for you.

WHAT ARE THE RISKS?

All investments involve risks, including possible loss of principal. Municipal bonds are sensitive to interest rate movements. Municipal bond prices, and thus, a tax-free income fund's share price, generally move in the opposite direction of interest rates. As the prices of the municipal bonds in a fund portfolio adjust to a rise in interest rates, the fund's share price may decline. Changes in the credit rating of a bond, or in the credit rating or financial strength of a bond's issuer, insurer or guarantor, may affect the bond's value. Funds that hold a portion of their assets in Puerto Rico municipal bonds have been impacted by recent adverse economic and market changes. These changes may cause fund share prices to decline. For more detailed information about risk, please review a current Franklin tax-free income fund prospectus.
