

Franklin U.S. Equity Index ETF (USPX)

Multi-Factor | Factsheet as of September 30, 2025

Investment Overview

The Fund seeks to provide investment results that closely correspond, before fees and expenses, to the performance of the Morningstar® US Target Market Exposure Index.

- The Morningstar® US Target Market Exposure Index targets large- and mid-capitalization U.S. stocks representing the top 85% of the U.S. equity market by float-adjusted market capitalization
- Offers low-cost, tax efficient exposure to U.S. equities
- Could be used as a core portfolio holding

Total Returns (%)

	Cumulative			Average Annual					Inception	
	3-Mth	6-Mth	YTD	1-Yr	3-Yr	5-Yr	10-Yr	Inception	Date	
Market Price Return	8.08	20.29	15.02	17.98	25.05	14.39	—	12.02	6/1/2016	
NAV Returns	8.08	20.29	14.92	17.94	25.06	14.48	—	12.01	6/1/2016

Benchmark	24.91	27.18	-18.87	19.62	9.62	25.99	-7.00	23.31	—	—

Performance data quoted represents past performance, which does not guarantee future results. Current performance may be lower or higher than the figures shown. Principal value and investment returns will fluctuate, and investors' shares, when redeemed, may be worth more or less than the original cost. Performance would have been lower if fees had not been waived in various periods. Total returns assume the reinvestment of all distributions and the deduction of all fund expenses. An investor cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expense or sales charges. Returns for periods of less than one year are not annualized. For current month-end performance, please visit franklintempleton.com.

Net Asset Value (NAV) returns are based on the NAV of the ETF; Market Price returns are based upon the official closing price of the ETF's shares. Returns are average annualized total returns, except for those periods of less than one year, which are cumulative. Market Price returns are calculated using the closing price as of 4 p.m. Eastern time on each trading day (when NAV is normally determined for most funds), and do not represent the returns you would receive if you traded shares at other times. Performance for the ETF and its benchmark index are as of the ETF's last trading day before the end of the period. Since shares of the Fund did not trade in the secondary market until after the Fund's inception, for the period from inception to the first day of secondary trading June 3, 2016, the NAV of the Fund is used as a proxy for the Market Price to calculate market returns.

The total annual operating expenses are as of the fund's prospectus available at the time of publication. Actual expenses may be higher and may impact portfolio returns.

Growth of \$10,000

Inception through September 30, 2025

Market Price Returns, assuming dividends reinvested

The Growth of \$10,000 chart reflects a hypothetical \$10,000 investment on Market Price and assumes reinvestment of dividends and capital gains. Fund expense, including management fees and other expenses were deducted.

What should I know before investing?

All investments involve risks, including possible loss of principal. Equity securities are subject to price fluctuation and possible loss of principal. To the extent the portfolio invests in a **concentration of certain securities, regions or industries**, it is subject to increased volatility. Performance of the fund may vary significantly from the performance of an **index**, as a result of transaction costs, expenses and other factors. There can be no assurance that the **underlying index's** calculation methodology or sources of information will provide an accurate assessment of included issuers or that the included issuers will provide the fund with the market exposure it seeks. **Derivative instruments** can be illiquid, may disproportionately increase losses, and have a potentially large impact on performance. **Small- and mid-cap stocks** involve greater risks and volatility than large-cap stocks. The portfolio is, or could become, **non-diversified** and may invest in a relatively small number of issuers, which may negatively impact the performance and result in greater fluctuation in value. These and other risks are discussed in the fund's prospectus.

Glossary

Standard Deviation: Measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return. **Beta:** A measure of the fund's volatility relative to the market, as represented by the stated Index. A beta greater than 1.00 indicates volatility greater than the market. **Weighted Average Market Capitalization:** A determination of a company's value, calculated by multiplying the total number of company stock shares outstanding by the price per share. For a portfolio, the value represents a weighted average based on the stocks held. **Price to Book:** The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds. **Price to Earnings (12-Month Trailing)** is the share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds.

Important Information

Effective August 1, 2022, the fund was renamed Franklin U.S. Equity Index ETF, updated its benchmark to the Linked Morningstar US Target Market Exposure Index, and modified its principal investment strategies. The Linked Morningstar US Target Market Exposure Index reflects the performance of LibertyQ Global Equity Index-NR from fund inception through 7/31/2022 and Morningstar US Target Market Exposure Index thereafter.

ETFs and ETPs trade like stocks, fluctuate in market value and may trade at prices above or below the ETFs/ETPs net asset value. Brokerage commissions and ETF expenses will reduce returns.

ETF/ETP shares may be bought or sold throughout the day at their market price, not their Net Asset Value (NAV), on the exchange on which they are listed. Shares of ETFs/ETPs are tradable on secondary markets and may trade either at a premium or a discount to their NAV on the secondary market.

Canada: This content is intended only for Canadian institutional investors that qualify as "permitted clients" as defined in National Instrument 31-103 - Registration Requirements, Exemptions and Ongoing Registrant Obligations. U.S. securities laws generally limit a non-U.S. fund's purchase of a U.S. registered mutual fund or ETF/ETP (a "U.S. Fund") to no more than 3% of the U.S. Fund's voting stock. You should consult your legal counsel prior to investing in a U.S. Fund.
